Editorial

A few months ago I attended the launch of Compuserve in Australia at Fujitsu's head office here in Sydney. It sure was an interesting press conference, with the vast majority in attendance unfamiliar with the service, and mainly representing some kind of business PC publication. And here I was, editor of one of the only home computer magazines in Australia and we're being told Compuserve is used mainly by home computer users. So, I started asking questions. How many modem owners are there in Australia who might use this service? No comment. Why will this succeed when Discovery 40 and Discovery 80 offered by Commodore seem to be failing in the home market? Answer, because Compuserve is better. Problem is, at the moment, it's not much cheaper. To prove the point, Fujitsu offered all in attendance the option of a four week free trial password to the system. Not surprisingly, only a few accepted this once-in-a-life-time offer.

After that four weeks of use, I can honestly say Compuserve is much better than anything we have here. The trick is, Compuserve doesn't try to be an electronic alternative to every day information sources. Instead, the service offers information you can't get any other way. It also offers powerful research capabilities to access information you can normally find in a set of reference books - only using a computer you can find it much faster. Telecom think that people are going to queue up to pay for database search facilities for an electronic version of the white and yellow pages. Now some well-to-do business people who are not feeling the crunch of Australia's current economic climate might jump at that sort of thing, but the mass market appeal is very limited.

For a start, a phone book is about as fast, by the time you go to the right Discovery page, type in the name at 75 baud - if you're unfortunate enough to still be using the Discovery 40 service - then wait while it finds the name. Once you have it, it's still not as good as the phone book. You can't doodle on it as you speak to someone. You can't stand on it to reach high shelves, flatten bent pictures, biff a friend over the head or throw on the fire for heat when it's out of date. Somehow it's little wonder people don't want to pay \$40 an hour for such a service. If you're not on line when you decide you want the number, you've also got to wait while the computer dials in and you find your password, type it in and wait whilst you get logged on.

Compuserve is different. It offers catalogues of products that don't come in catalogues, you can play with car models, mix and match features and find out a price, you can get transcripts from television shows, look up an encyclopaedia, check out a reference listing on newspaper stories over the past ten years, talk to a special interest group about anything from computers to pet rabbits. Let's hope Fujitsu does kick off Compuserve here in a big way. If it works, the gateway to the American service Fujitsu will be offering may be improved to include some information held in a locally maintained computer system. No doubt, with enough users, there would soon be good reason to add some local service providers too. In case your wondering, Compuserve is purely text based. You don't have to waste time waiting for pretty graphics to appear. To help make the system easier to use, there are a number of front end packages which let you choose what you want before you login. Once you're connected, the program grabs the messages and files you want in one hit. With Compuserve available in Australia soon, maybe Telecom will improve their own system and pricing structure. □

Andrew Farrell

The Ultimate All-in-One Amiga® 2000 Add-on... 68030 POWER+16MB RAM+SCSI CONTROLLER

Replaces up to FOUR "normal" expansion boards!

IMPACT
Series II

Now, a 22 or 33 Mhz 68030 accelerator board, up to 16MB of 32-bit wide RAM and a high-performance SCSI hard disk controller in a single A2000® "CPU slot" expansion board!

Check out these features:

- ✓ The perfect companion for NewTek's Video Toaster.™
- ✓ 22Mhz or 33Mhz factory installed, surface mounted, 68030 CPU and 68882 FPU.
- ✓ Up to 16MB of 32-bit wide memory expansion. 4MB minimum factory installed memory on 33Mhz version, 1MB minimum for 22Mhz.
- ✓ GVP's new custom 32-bit wide, 1MB or 4MB, SIMM32™ memory modules offer flexible, easy-to-install memory expansion. 22Mhz model has 1MB factory installed memory, expandable to 13MB. 33Mhz model has 4MB factory installed memory, expandable to 16MB.
- ✓ On-board high-performance "Series II" auto-booting SCSI controller with factory installed FAAASTROM SCSI driver and SCSI connectors for attaching both external and internal SCSI peripherals.
- ✓ Direct DMA access to the full 16MB range of 32-bit wide memory expansion by the on-board SCSI controller. Due to the A2000 bus architecture, this is ONLY possible when SCSI controller is placed directly on the 68030 CPU bus (as is

the case with the A3000!). Provides ultimate SCSI hard disk performance!

- ✓ GVP's legendary FAAASTROM SCSI driver supports virtually all SCSI devices currently on the market, including hard disk drives, CD-ROM drives, Magneto-Optical drives, removable media drives and tape drives.
- ✓ Switch to 68000 mode by simply clicking on our new "68000 Mode" Icon, or include our special "mode switching" utility in your startup-sequence and select required mode each time system is rebooted, by holding down mouse buttons.
- ✓ Provides the ultimate expandability of your A2000 system. Plugs into the "CPU accelerator" slot, thereby leaving ALL FIVE A2000 expansion slots free for future expansion.

COMPARE:	A2000 +GVP All-in-One	Commodore A2500/30	Commodore A3000®

Ram Rumbles

Media Spottings and Applications

Don't forget we're looking both for Commodore computers in the media and at work, in Ram Rumbles this year. Starting next month, the best published letter will receive a free one year subscription to *The Australian Commodore and Amiga Review*.

Now to kick things off - the incredible finding that O.T.C. have not one but several Amigas chugging away.

One machine has an AT bridge-board which captures data from a larger computer regarding every overseas call made by means of a special program and an 8-port serial card. This is transferred to the Amiga and recorded onto one of two 600Mb optical drives, with a 600Mb Fujitsu hard drive handling primary storage requirements. When a customer complaint is received, O.T.C. can interrogate the Amiga to find out what problems occurred at the same time as the reported difficulty in a bid to locate the cause of the fault.

The Amiga also displays a large world map with a flashing red dot pin-pointing world trouble spots in the event of an earthquake or other disaster which leads to a mass call failure - hundreds of phone links banking up with nowhere to go.

Yes, it's all done on the Amiga. More on this installation soon!

Ground Zero

On the 18th of March, Ground Zero was about gas testing at Maralinga. In the movie we see a man loading up a banking program on a 1541 disk drive. Unfortunately the computer was obscured by darkness - but it must have been a C64 or C128, according to our informant Mr A. Gromly of Walkerville, S.A.

PC91

Commodore were obviously missing from this event, apart from a smallish stand operated by the Hard

Disk Cafe. Congratulations folks on a great effort at the show, but surely Commodore's range of machines aren't so unique that they can sit back and happily rely on their own show - World of Commodore, July 12 - 14. Many other manufacturers showed off publishing, presentation and animation packages. Indeed, many stands had live presentations rolling all day. The Amiga could have turned a few heads at this event.

CDTV Movie Reviews

Fancy yourself as the next Bill Collins? VOLITION Software is looking for people who might like to contribute movie reviews for a forthcoming CDTV release, *Ten Thousand Movies On CD*. You'll need to have the time to contribute up to 500 reviews in a period of a year or so, about 10 every week. Once the disc is released you'll be earning royalties on every sale. Reviewers with computers and modems are especially welcome. For more information write to: Movie Reviews, P.O. Box 158, Darlinghurst 2010.

Cursor Curses

Commodore Review

In the April Cursor newsletter of the Commodore Computer Users Group Qld Inc, the librarian ever so tactfully points out that in his humble opinion our magazine rates a mere 2 out of 10. He also observes that our covers are always atrocious, and that we never print the year on the cover - a real annoyance for a librarian.

Continued on p6

UPDATE COLUMN

This update column is coming to you from thousands of miles away. Once again, I am in the UK searching out the latest and greatest in software to bring back to Australia for Pactronics to distribute.

In education software, we have a brilliant new educational adventure, RODY AND MASTICO. Kids love it, because they can control their characters, colour in the screens, save screens, load screens and print them out. It's a brilliant, full colour, icon controlled game that teaches as you play!

Books, books and more books; the Abacus range of Amiga books continues to grow with their latest edition:

BEST OF AMIGA TRICKS AND TIPS. This is a compendium giving literally hundreds of tips on how to get the most out of your Amiga.

Over the last few months, we have witnessed the growing popularity of Strategy / Simulation games. To augment our range, Pactronics now have some of the hottest simulation games around!

TOWER FRA - Airport Traffic Control simulator

ACTION STATIONS - Naval Simulator covering the years 1922-1945

THE FINAL CONFLICT - World Wide Political Simulator

WHITE DEATH - WW II simulator of the Russian Front

BLITZKRIEG - Battle of the Bulge simulator

RORKES DRIFT - Boer War Battle simulator

One final word about AMOS! Buy it! AMOS is proving to be THE hottest Amiga title in town. No other language gives you the flexibility and control offered by AMOS.

Beauty and Functionality Redefined

The Next Generation in Amiga® 500 Add-On Peripherals

IMPACT

Series II

Turn your A500® into a
Serious and More Fun
Computing Tool Today!

GVP's New **SERIES II**
A500-HD+ is The Ultimate in
Hard Drive, Memory and
Expandability for your Amiga 500.
Major features include:

Leading Edge

Same high-tech custom VLSI and
FAAASTROM™ features as GVP's new
Series II A2000 SCSI-RAM Products.

Foresight

Unique new "Mini-Slot"™ brings out
all the A500 expansion bus signals,
allowing for exciting future expansion
options – the only intelligent
alternative to risky "Pass-Through"
functionality.

Reliability

Includes internal fan to keep you cool
and robust power supply ensuring your
A500 power supply will not be
overloaded. GVP will not compromise
on quality and reliability!

Memory Expansion

Internal RAM Expansion up to
8MB using easy-to-install SIMM
memory modules.

Sleek

Custom injection-molded styling
perfectly matches your A500 for
unequaled beauty and elegance, setting
a new standard for A500 peripherals.

State-of-the-Art

New 1"-high internal hard disk drive,
available from 40MB through 100MB.

Performance

Provides no-compromise hard disk
performance which until now has
never been seen on the A500.

Seeing is Believing

Take one for a Test "Drive" at your
nearest GVP Dealer today!

★ NOW ★

He also states that our program
listings are always suspect - strange
considering over the last year or
more most of the listings we have
printed were provided by the Club's
President, Greg Perry.

As for our covers, point taken,
but then we've always prided our-
selves in great editorial which has
made possible our survival and in-
deed amazing growth over the past
eight or more years of publication.
We're working on the covers - see the
last couple of issues!

As for the measly 2 out of 10 rat-
ing, I refer to the comment which ap-
pears on the very next facing page
13... "Australian Commodore and
Amiga Review are making a great ef-
fort on behalf of C64/C128 and Ami-
ga. Support them." and on the next
page "...read ACAR." Well Mr. Librari-
an, up your nose with a rubber
hose!! □

BASE Board (0-6Mb RAM for the A500)+Clock

- Simple "Plug-in" installation
- Works with Fat and Fatter Agnus
- 4 Megabytes contiguous memory
- 6 Megabytes contiguous memory optional
- Memory may be installed in 1/2Mb increments
- Multi-Layer construction means it:
 - Has perfect data integrity
 - Works with any manufacturers DRAM
 - Works with any combination of DRAM speed (60ns-150ns)

BaseBoard 0Mb \$249 - 2Mb \$449 - 4Mb \$649

What they said...

If you want more than the essential 512K RAM upgrade for your A501 slot or if you need Super Agnus support, the Baseboard system is the way to go.

John Wolfskill
Amiga World
Senior Writer, Technology

Notepad Notepad Notepad

SpectraColor

Software company OXXI have released a new HAM paint package complete with brush animation capabilities. The package looks a lot like *Photon Paint*, but there are a host of new features. You can easily create a curved path for animations, or alter the shape of a brush during the animation. *SpectraColor* tweens, morphs and animates - the only HAM animation package in its class according to OXXI - do they know about *Deluxe Paint IV*?

The program will sell in Australia for under \$150. For more info call Computermate on (02) 457 8388.

1930 Monitor

Now available here for \$649, this Commodore monitor is VGA, not multi-scan (whereas the 1950 is multi-scan).

A multiscan monitor can do all that a VGA monitor can do, but can also do lower resolutions, somewhat useful on a machine like the Amiga with its many possible display modes (if you're going to use them), and the possibility of programming the chip which handles display.

Deluxe Paint IV

Still more improvements have been made to the paint program other paint programs are measured by. Electronic Arts have finally integrated some of the features previously bestowed upon the boring old MS-DOS version. You can now ex-

pect some much slicker graduated fills and anti-aliasing. There's also support for HAM and productivity modes, along with a special light-box feature for creating hand drawn cartoon animations similar to Disney's *Animation Studio*.

The whole look and feel of the program has been brought in line with *Workbench 2.0*, and there's better control over animations. Expect to see a release around the middle of this year.

Schools offered Amiga package deals

In another bid to acquire a bigger slice of the educational market, Commodore are offering a range of packages to schools at extraordinarily good prices.

Including monitor - you can get:

- Amiga Deluxe Pack for \$1290
- A2000 Pro Pack for \$1820
- A3000 Performance Pack for \$465
- PC AT Pack for \$1790
- PC 386 Pack for \$2580

Assorted programs are thrown in to help sweeten the whole deal and kick off the new owners with some immediate useful applications. Let's hope they sell thousands!

Touch tablet

Local software company Serendipity Software have launched a complete Amiga touch-tablet package combining the Calcomp Wiz and

necessary drivers for use with a range of software package.

Once in place, the software allows most mouse-driven programs to use the touch-tablet as an input device.

For more information contact Peter Skarpetis on 02 449 8133 ext. 283.

Japanese on Videodisk

Temple Industries in W.A. is authoring the code necessary to set up courses for learning Japanese on videodisks, controlled by Amigas. The curriculum is being developed mainly at Curtin University. Three or four more such disks will be developed in the future.

Anthony Temple, the mover and shaker in this venture, also sees a possible CDTV spin-off in the future. If Commodore is smart, they will jump into marketing the product with such things as an Asian keyboard sets and the like.

Graphic Designer

New Horizons Software have issued a challenge to Professional Draw - the structured drawing program. Graphic Designer offers smoothable curves, multiple drawing layers, and flexible text handling and unlimited multicolour patterns. It contains an ARexx port with complete macro language. You can get full control over printing, reduction, enlargement, sideways printing, and print density. You can even get drawings of over 64 square feet.

Only 512K required, and price is US\$125. The product should be available at the end of May.

ProVector 2.0

Another graphics package with similar features; this one features multiple

level "undo", "layers" system, and text flowing on any path. Compatible with WB2.0, and has the ability to save files in ProVector (IFF-DR2D), IFF-ILBM, HP-GL or Postscript formats, and a dithering routine to simulate 256 onscreen colours. ARexx-compatible.

Price is US\$ 299.95 - from: Taliesin, Inc., 1327 Corte De Los Vecinos, Walnut Creek, CA 94598, USA. Tel: (415) 2561195.

Newsflash disk magazine

A disk magazine with a difference, Newsflash is now available. As well as regular editorials, it has programs, utilities, creative art, music, demos, and other notices. It also includes a world wide message bank, a special service for readers. Quadrant Computers (09) 375 1933. (Dealer and retail enquiries welcome.)

Pagestream qwikforms

The Sterling Connection, who also have a bunch of spreadsheet templates for home and small business called Templicity, have created over 100 adjustable layouts for PageStream, including invoices, inventory control, order forms, purchase orders, job estimates, legal forms, etc. For more information call Computermate on (02) 457 8388.

PowerPacker Professional

You can't pump up a disk, but with PowerPacker you can compress its contents into less than two-thirds the space otherwise required for storage - on floppy or hard drive.

PowerPacker uses sophisticated crunching algorithms to reduce the size of files, allowing about 40% more material to be stored.

Amiga stargazing

An astronomer called Mighell from the Netherlands developed an Amiga-VAX corroborative software/display setup for counting stars. The Amiga links to the VAX as a low-cost display of the serious number-crunching done by the VAX. Mighell chose the Amiga over the competition for its graphics and multi-tasking. Oddly enough, I found this report in "PC User" magazine, a publication which ignores Amigas as much as possible!

Xcopy mystery unravelled

There has been some confusion about this program - there was a PD disk called XCopy on some PD catalogues with a letter which described how a programmer had been "ripped off" by Cachet Software (the authors of Xcopy3).

The programmer said he had written a new version and Cachet had refused to pay him, so he was releasing it into the PD. In the words of Martyn Brown of 17-Bit Software in the UK:

"After talking to the director of Cachet Software (who also happens to be the author of Xcopy) I can clear up the situation.

"The version of Xcopy in question (2.3) is an illegal and unofficial version that

has had features added, commonly called a "hack". Cachet Software did not ask for this work to be carried out - it appears that the programmer in question added the features and sent it to Cachet, who rejected the "new" version. In which case the programmer has no case.

"The latest official version of Xcopy is Xcopy3 Professional, including all sorts of correct, working features and is the only one recommended by Cachet. Cachet assume no responsibility for misuse when using 2.3 and have said that use of some of the added features can actually harm the disk drive.

"So the disk has been removed from some PD lists, and we urge all PD distributors to do likewise."

Controller for 2.5" and 3.5" hard drives

Released by ICD, Inc., it is called AdIDE, and is an autobooting IDE (Intelligent Drive Electronics) hard drive controller. Fits into any Amiga under Kickstart 1.2 or higher. Also compatible with other devices on the external expansion port and lets you boot from external floppies when required. Said to be the smallest host adapter for the Amiga.

Price US\$159.95 - info from: ICD, Inc., 1220 Rock Street, Rockford, IL 61101, USA. Tel: (815) 9682228 - or try Maxdrive Systems on 008 076 301.

The colourful world of

Maths VISION

by George Kimpton

Take a bunch of numbers, plot them, colour them and view them from anywhere you like and you have the principle behind *MathsVISION*. Trigonometry, boolean algebra and recursive formulas never looked so good.

I am sure there are times when, like me, you have found mathematics either plain boring or frustratingly incomprehensible. Then along came Mandelbrots and Fractals. Still incomprehensible, but fascinating pictures. Instead of seeing masses of boring numbers we see magnificent swirls of colour patterns which represent ranges of numbers.

The experts tell us these are all part of the Chaos Theory of Mathematics where seemingly random happenings are in fact mathematically predictable. This branch of mathematics is regularly being used to create scenery using products such as *VISTA*. The resulting IFFs can be used as backgrounds in paint programs, or as textures in ray-tracing or animation packages.

People are even proving that normal objects such as a flower or leaves can be described mathematically and can consequently be drawn by a computer. *MathsVISION* actually provides the formula to plot a flower. In other words I think they are trying to tell us that everything in nature can be described mathematically. (Apart from *Commodore Review* contributors - Ed.)

Applications

Some game programs in fact do use fractals for scenery and even

create individual trees, plants, rocks, etc. to provide the right background. The artists among us now can also easily use programs like *VISTA* to render mountains, rivers, clouds and all those things necessary for good backgrounds in art work without the usual hard work.

The only problem is that we don't really understand what we are doing and how to get exactly what effect we want. Well, with *MathsVISION*, we can get a little closer by introducing our own math formulae into the program and then controlling just how it will be displayed.

We can either have the simple X,Y plots we are all used to or colourful contour or perspective plots. Thus we are capable of evaluating functions with one or two variables by displaying the results of our formula on screen in full colour and in 3-D if necessary.

Requirements

MathsVISION system requirements are fairly basic; 512k of RAM (more is faster), one disk drive, although two are better, and Workbench 1.2 or higher. Provision is made for hard disk installation and different versions of the program are supplied for an accelerator board.

AREXX is also supported and covered in a special section and tutorial.

In the author's own words: "*MathsVISION* is a tool for viewing mathematics. Its pictures are pictorial representations of mathematical expressions and data. It provides many different techniques to visualise any mathematical expressions and data." It also seeks to stimulate new insights into the behavior of the phenomena being studied.

It allows the use of colour cycle art and provides the ability to animate functions and to explore Chaotic Functions such as the Mandelbrot set, Cantor set, Lorenz equation and bifurcating formulas all in full colour.

Wow, what a mouthful, but it sounds fascinating doesn't it?

MathsVISION has a sophisticated graphics interface which allows you to choose definitive limits over which a function is to be evaluated without entering specific data. It also allows you to choose the form of display to give the best visual understanding of the resulting data. It then allows you to analyse that data easily with a zoom facility and cursor readouts on screen.

The basic X,Y or simple plots are for single variables. When we use the contour or perspective plots we are really moving into the multiple variable fields. Each contour is displayed as a different colour. Contour colour and width is selectable through something called a "Modulo".

The Function itself is entered as "Val" in the Edit screen. The Variables, from FA to Fn, which control the function are also entered via the Edit Screen. The other parameters and plot controls are through pull down menus.

The results of the Contour and Perspective Modes are displayed as colour contour patterns on your screen with some staggeringly beautiful patterns if the formula and the functions it uses are right. However even with the most mundane formula there can still be some beautiful results. The results can be saved to disk or printed out.

Practicality

Yes, you say, but how does this help me with working out my investments or that rather complicated project that's driving me mad at present? Well, in any of the display formats you can use the Analyse Cursor which allows you to move around the screen or graph and automatically read out the resulting parameter values that correspond to the cursor position.

Tutorials take you step by step through the working of very simple formulae concerning electrical power or the calculation of sales tax on an item for sale. This is handled as a single variable in the simple format and in a two variable format as a contour display where you can move your cursor around and find the resultant of varying either price or sales tax.

There is even a tutorial which shows you how to determine the optimum investment and way to invest your hard earned savings to achieve

Distributed by:

ComputerMate
02 457 8388

RRP:

Amiga \$289.00

a stated goal. Just what we need while every cent counts these days.

Considerable care is given in this tutorial to teaching you how to organise the data of your problem to minimise taxes and optimise capital gain and then devise a formula that will give you the information you need. A scan of the resultant graph in the Analyse mode allows you to optimise your investment.

Problems

Quite complex formulae or functions are possible using the edit screen but you must learn to use *MathsVISION's* own peculiar format and rules to enter your calculation or function and variables or watch out.

One thing that is very frustrating with this program is that there are times when you do not know if the computer is working or not, and if it is not working, did you do something wrong. It sometimes just sits there and smirks at you with nothing ap-

parently happening and you are none the wiser.

All is pretty straightforward up to this point but beyond this the manual tends to fall down. For a practising mathematician the remaining pages may be easy to follow but for me it often left just too much out. Maybe if I did not have a deadline to meet in writing this article I could have eventually fumbled my way through in a month or so.

This program is definitely not for the casual mathematician unless you stick to basic calculations, it is for the professional or someone who likes a challenge or collects programs of this type. If you like to produce pretty pictures using mathematics and are prepared to persevere you will probably win through.

What this program badly needs is a completely rewritten manual or a new supplement. I feel sure it has tremendous potential as the preplotted screens show. One screen actually shows how you can mathematically

draw a Spleenwort Fern frond and even supplies the formula to do so.

Other preplotted screens show a magnificent Mandelbrot and some other plots with very interesting shapes and colour patterns. Formulae and functions are again supplied to allow you to experiment with them. There is even a means of producing mathematical sounds if you should so wish.

This is where it all comes apart though - try as I might I could not bring up a resultant screen plot of the fern. After clicking on Plot I was faced with a black screen with the usual snooze balloon showing that the computer was busy for some time. Finally the snooze disappeared and the pointer came back but no fern. I flipped screens but it was nowhere to be found.

What the manual does not explain very well is the fact that you need to have some specific "Hooks" up and running to make these things happen and it doesn't say what happens with

RapiSoft

the wrong ones running.

Hooks are specialist sub programs for specific data manipulation purposes. This is discovered through diligent re-reading of the manual but it still doesn't tell you which ones are needed or the procedure to load them after you have started *MathsVISION* running. The old hand remembers the (Amiga-N or M) method but a new chum might not.

Other things can also cause a lack of display. Determination to make the program work and a number of blank screens finally led me to experiment with scaling and magnification factors - and Bingo!, a display at long last on some hitherto unseen plots.

There was also a mysterious "Z" which appeared when I tried to adjust the angle of view in perspective mode with some formulae. This was apparently telling me to zoom in if I wanted to see anything at all but not a word in the manual.

The manual also tells you to browse through the examples on the Pictures disk. Something was missing again - for clicking on icons from Workbench did not produce any results when I tried even with the program running.

However it was possible to view some of these preplotted pics when running the program, through the load requestor. These were enough to whet the appetite to press on and do my own thing with my own formula. Unfortunately the results were somewhat disappointing. Perhaps with more time I will have better luck.

Conclusions

I believe this program has much to offer if one could only get into it but it needs a better manual, one the ordinary person can follow, otherwise, in its present format, it will appeal only to the mathematicians or those who like a challenge. It will of course still help and satisfy those who are satisfied with fairly basic maths analysis and manipulation.

For those who are prepared to persevere I suspect the rewards will be great with some fascinatingly beautiful screens, such as the Julia Mandlebrot demo, once one learns to master the dreaded "Hooks". These hooks seem to have some mysterious protocol whereby loading the wrong one cancels others out.

Unfortunately, it is by no means clear from the manual which does what and which are absolutely necessary for specific projects. In fact there is practically nothing said about the demos except for some cryptic remarks on the Edit Screen when the appropriate formula is loaded.

The Amiga may be user friendly but this program, or maybe it's just the manual, is not. Well, good luck with *MathsVISION* if you should decide to take a chance with it and if you succeed drop us a line and let us know what you found. ☐

The Ultimate Games Pack

40 GAMES ONLY \$27

Introducing the Public Domain offer of the year! This fantastic package of Amiga software contains eight disks full of the latest Amiga Public Domain games! Everything from action, strategy and adventure games to role playing and trivia games. All you'll ever need!

Enjoy hundreds of hours of game playing for just 68 cents per game! If you were buying 40 commercial games, you would expect to pay **around \$2000!**

All games come with documentation and are easily loaded from the Workbench or CLI; ideal for any Amiga user - novice or experienced. All software has been extensively tested for viruses.

Contents of the pack:

Action Games: Air Ace II, China Challenge, Destination: Moonbase, Downhill challenge (Skiing), DriveWars, Humartia, MirrorWars, Missile Command, Rings of Zon, Running, Sealance, Space Wars, Sys, Tron.

Strategy Games: Blackjack, Conquest, Headgames, Imperium Romanum, Logic, Miga Mind, Monopoly, Obsess-o-Matic, Puzz, Rubik Cube Solver, Seahaven, Steinschlag, Tetris, The Brain, Triangle, Triple Yacht-Z, Train, Tripppin, Up&Down, Welltrix, Yawn!

Quiz Games: Hollywood, Quiz (Bible, States, Physics & other quizzes).

Role-playing Games: Mechfight, Metro.

BONUS: Cheatsheet: Cheats, hints, passwords & solutions to hundreds of commercial games!

Nearly all the games from the last 100 Fish Disks are contained in the pack!

Rapisoft's P.D. Library now consists of:

Amicus, Amigan and Fish Disks (up to 470), GIF Picture disks and demo disks. All only \$4 each!

Send now for your two-disk catalogue!

Please send me the following:

- ☐ ___ copies of the Rapisoft Catalogue Disks @ \$5 each
☐ ___ copies of the Ultimate Games Pack @ \$27 each

HyperBOOK

More powerful than a CanDo. Able to leap tall applications from a single hot point. Faster than a speeding AmigaVision. Look! In the drawer, it's a book, it's interactive, it's Hyperbook!
Andrew Farrell
crammed into a phone booth to file this hyper report.

Yes folks, here at the synapse snapping edge of time, Gold Disk are breaking new ground, releasing products they haven't advertised for six months, haven't taken hundreds of orders on already, and that do work without any hidden bugs. However, *Hyperbook* is not a new concept. Why, it's been hyped up before with products like *CanDo*, *AmigaVision* and even the likes of *UltraCard*. And of course, in the Apple Mac World with products such as the original *Hypercard* and *Supercard*.

Hyper software lets you jump around, madly flipping from one unrelated fact to a picture to another fact to a different bit of information and then back again. It's around the ency-

clopedia in eighty clicks of your rodent.

Hyperbook is all this and more. But seriously, from stand alone applications to interactive hyperbook presentations, *Hyperbook* offers a smart interface and reasonable power to make it all possible.

Imagine a *Hyperbook* World Atlas. Looking at a map of the world you click on a country of interest. Next up you're viewing the states of that country, you choose one and click. This time you're presented with a picture of the capital, charts on the population and other key facts and a graphic showing the population growth over the past ten years. You click on the graphic and you get to listen to a speech by the prime minister given at the most recent meeting of government.

This is hypermedia. The same program could design applications, running stand alone on your Amiga without the main *Hyperbook* program. We're talking phone books, appointment managers, educational software, games ... you name it. *Hyperbook* is not everything *CanDo* is, but what *Hyperbook* can do, it does with style, ease and elegance.

Installation

Inside your hyperbox there's two disks contained in the usual "if you break this seal and live packet we will have to kill you", with all the relevant license details that go along with that.

There's also a handy guide to applications area. This was the first book I read. It really threw some light

onto the potential of this package. The 148 perfect-bound user manual has a cluttered look, but is nevertheless filled with useful examples and plenty of explanations.

Installing the product is as simple as every Amiga program should be - drag the icon to the drawer you wish to contain the application. It will help immensely if you also have a copy of AREXX on your system - AREXX arrives standard with Workbench 2.0 or you can buy it as a commercial product.

For those unsure, AREXX provides the interface required to allow programs with an AREXX port to communicate with each other. AREXX has a programming language of its own, and each application running with AREXX adds its own commands. In essence this means you could tell *Digiview GOLD* to grab a picture from a spreadsheet program. These sorts of capabilities allow amazing hybrid applications to be developed. The limits of one program can be filled in with the power of another.

With this in mind, and the fact *Hyperbook* boasts a very large AREXX command set, and you begin to see the power of this program stretches well beyond the interface we're about to take a look at.

Inside the Hype

When you first launch *Hyperbook* the screen opens with a large blank expanse waiting to be hyped up with books. To the right is a bunch of tools for constructing the hype and there is an array of pull down menus. The interface looks Workbench 2'ish and has a slick, smart feel. Everything happens quickly and smoothly.

RRP:

Amiga \$139.95

Editing a "Hotpoint"

Arexx manual

It's best to start by having a look at one of the example books included on the second disk. If you have AREXX, (*Hyperbook* will run AREXX for you if it's there), you can also try out the applications. These books are more complex and include functions which modify the book, work with files and data.

A quick guide around the menus must begin with the standard Project menu; from here you can LOAD and SAVE a book or defaults, print pages, iconify or shrink the window down to a tag on Workbench or empty the BIN - which is kind of like clipboard, but different. The programs file requestor is F.A.B. (Farrell Approved Build). All available devices are listed, and the option to sort the list is included. It is fast and easy to use.

On the page menu you can create, delete, edit, load, save and merge pages - or screens in real terms. Many pages, or just a few depending on the requirements, make up a book. In this case, because you jump around

the pages, it's a hyper book!

There's a host of options on the Command menu for dealing with text, objects and pages. You can read and edit text, display a picture or delete a file. For fast development of hyped up books you can also run your favourite wordprocessor or paint program directly from *Hyperbook*. From the Preferences menu, dozens of default program settings can be altered.

The last menu handles the AREXX interface. You can create, save, load and edit macros or issue a single command. AREXX macros can be attached to parts of a *Hyperbook* application.

AREXX provides the interface required to allow programs with an AREXX port to communicate with each other

Tools and Gadgets

Although defaulting to the standard right hand screen position, *Hyperbook's* tool bar may be positioned wherever you wish just by grabbing the top bar and moving it around.

Tool functions include; Read the *Hyperbook*; Edit; Bin; Group; First/Last/Next/Previous page; Contents; Return to page; Create Note; Drawing or List; Create Button; Picture or Page.

Creating a page is simple. Choose create page and then fill it with all the information you want on it - pic-

tures, text and buttons. Any standard IFF file can be imported. *Hyperbook* keeps an original copy in memory, whilst allowing a portion or the entire original to be scaled and placed on the page. Later on you can easily crop, move and size the image. Text can be placed in a similar fashion, with excellent control over fonts, formatting, point sizes and styles. *Hyperbook* receives top marks in this area.

All types of boxes containing any kind of element may be turned into a hot point. When you click on one of these defined boxes, *Hyperbook* can be instructed what to do. Using the standard requestors you can trigger one event. With help from AREXX you can trigger several. Normally you will want to jump to another page, however other possible actions include: Show Picture; Display Text; Go to page; Show/Hide; DOS Command or AREXX Command.

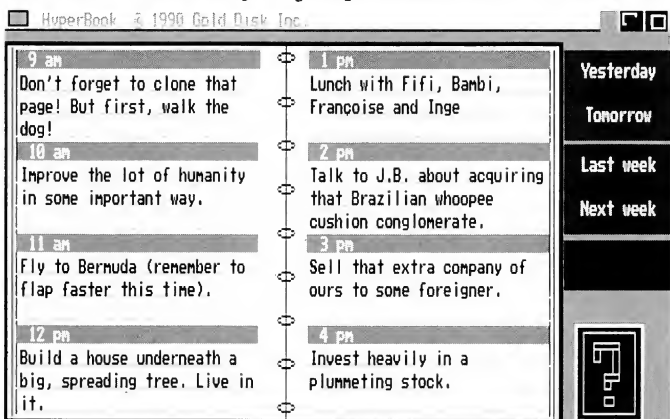

With all these options up your hyper sleeve the world of hyper media opens up along with the possibility of including a host of effects such as music and sound not directly supported within *Hyperbook*.

A small selection of drawing tools enable simple diagrams and graphics to be created within *Hyperbook*. The graphic elements are handled in the same fashion as a structured drawing program, meaning you can easily modify the image later.

Conclusions

Hyperbook is brilliantly designed. It is simple to use, works quickly and intuitively. I would recommend it for developers of graphic intensive education products, teachers, and professionals for presentation work. With the right graphics, text and sound, *Hyperbook* has incredible potential. Well done Gold Disk.

Let's see some local applications for this package real soon now. Much of the potential of *Hyperbook* lies in the uses to which it is put. □

Diary application

Cameron Handy Scanner

by Stuart Kennedy

Just when you thought it was safe to close up your wallet there is a new must-have peripheral in town - the scanner. This image and text sucking widget is fast becoming the darling tool of desktop publishers, CAD jockeys and database maintainers.

Scanning is also great fun, especially for playing video voodoo with friends, enemies or on yourself. Feeling vindictive? Just scan in a picture of that ex girl/boyfriend or pesky relative and video hack their anatomy into amusing shapes.

In the US, the market for scanners more than doubled last year and the giant PC compatible market has become very well served with devices ranging from simple, low resolution, black and white scanners costing several hundred dollars up to US\$15,000 systems able to scan and decipher the Dead Sea Scrolls.

While scanners are being thrown at IBM compatible users, scanner offerings have been thin on the ground in Amiga land. The reason is that while a few scanners transmit data over the universal serial or parallel ports, most use either a SCSI interface or the GPIB/IEEE-488 bus. For a manufacturer wanting to sell an Amiga product compatible with the large Amiga 500 market this means having to do a software port and designing a special interface.

Fortunately Germans like the Amiga and have bought it in large enough numbers to entice German scanner manufacturer Cameron GmbH into producing a range of machines which will work with the 500 and the 2000+ series. Models range from a simple 200 DPI black and white model to a colour unit able to scan in 4,096 colours.

I tested the Cameron Type 10 hand held scanner which has switchable 200/300/400 DPI resolution, a large 105 mm scan width (most hand held scanners have a 64 mm scan head) and is capable of producing 16 grey tones as well as black and white.

The unit comes with two interface cards: one for a 2000+ Amiga which fits into a vacant 2000 slot and an Amiga 500 interface which hooks on to the expansion connector on the lefthand side of the computer. The scanner has a long 1.7 metre

cable which attaches to either interface with a DB9 plug.

The scanner is palm sized with a green plastic window mounted in the head which lets the user see through to the material being scanned. The window also defines the maximum scan width of 105 mm. On the left is a three position switch which selects a resolution of either 200, 300 or 400 dots per inch. On top of the unit is a large oblong button which turns scanning on. A red LED mounted inside the scan head lights to

tell the user that scanning is in progress. There is a contrast wheel on the right and a four position switch which selects between black/white or three levels of grey scale dithering.

So how does it work? The quickest way to move an image from the desktop onto the screen is to run the supplied demo program. Find a picture, hit the big grey button, and drag the scan head over it. Bingo. A black and white rendered image appears and a whole new world of plagiarism opens up.

The first surprise for a scanning novice is that the screen image is much larger than the scanned picture. Increasing the DPI makes the image even larger. It's all a matter of screen resolution and dots per inch. Resolution of a scanner is determined by the number of dots the device can sample per linear inch of document. Image symmetry and clarity is best with the screen in 640 x 400 interlace mode.

Handy Painter

Cameron supplies a scanning cum picture editing program called *Handy Painter*. The first time I ran *Handy Painter* off the master disk the menus came up in German - the program can be installed in a number of languages including English.

The paint program has a full suite of editing tools for zooming, cutting, pasting and filling parts of a scanned image as well as an array of drawing tools like lines, boxes and circles. The program uses all available ram (chip and fast) for its picture buffers so very large images can be manipulated. The downside is speed. When running a four bitplane, 640 * 400 interlace screen the software grinds along very slowly.

A one megabyte machine is marginal for running high resolution screens and scans. I was booted out of the program many times with out of memory errors - fortunately the program can save work in progress if the memory mark is overstepped. Beside running out of RAM, I also found the program to be rickety in the reliability stakes. It would often hang or guru inexplicably. Once a scan was on the screen the best part of using *Handy Painter* was leaving it for something easier to use and more robust like *Dpaint III*.

Black and white mode on the type 10 was excellent for snaffling up simple line drawings and can be used to build an impressive clip art library. But the most stunning results came by using the dithering and grey scale rendering ability of the scanner and the paint program.

Photographs are continuous tone images meaning they are made up of an infinite number of grey shades between black and white. The Cameron Type 10 scanner can differentiate 16 levels of grey through dithering (changing dot densities to simulate shades of grey). The software is capable of rendering the dithering into "real" grey scales by using a 4 bitplane, 16 colour screen. (This is not good enough for professional use which requires 256 grey scales - Ed.)

Processing a scanned image into greys takes time and reduces resolution (and picture size) by a factor of four. It also uses a lot of memory. On a one meg machine the maximum sized image able to be scanned and processed into greys is around 55 mm by 55 mm. The software allows the user to specify the limits of a scan and will automatically set the maximum allowable dimensions for available memory.

All this means that the Cameron Type 10 can scan a black and white or colour

AMIGA

Doctor Ami..

Doctor Ami.. is a memory and hard drive diagnostic program that performs sophisticated, low level tests on your Amiga system. It uses a full intuition interface with simple, clear controls and displays.

The program scans the system for all memory - including on board; expansion and accelerator memory. Tests regions and displays error list of bad memory locations and generates an error file.

Allows user to patch any file on the hard drive using the bad sector. Sectors with errors are removed from the black availability map so that they will not be accessed. Can also be used to format damaged floppies; examine any mounted drive device etc etc. A MUST for all Amiga owners.

NOW ONLY \$49

Listed below is a sampling of our great range of products at excellent prices. We currently have over 1000 Amiga products (growing daily) and a great range of 64/128 products (over 400) to cater for your every requirement. We also stock a large range of utilities and books, and we guarantee all our products. Drop us a line, or phone or fax us for our free catalogues which include latest games and educational programs!

photograph and display a very realistic rendering of it on the screen. The best a straight black and white scanner can do is display a crude, "dotty" image of a continuous tone picture.

Character Reading

The Cameron scanner can snaffle up and decipher text as well as graphics. Optical Character Recognition (OCR) is the ability to turn a piece of scanned text into an ASCII text file. Right now the best OCR packages have about 95% accuracy which might sound flash but means there will be 50 bodgy characters in a thousand word text scan - that could add up to 50 misspellings. Scanned text needs a thorough washing through a good spelling checker.

There are two types of OCR software in use today. The first and most intelligent form is feature extraction where the software checks the attributes of the scanned characters against a list of attributes each character is known to have. A "p" would be listed as a vertical line with a closed semi circle in the upper right hand sector. This method allows flexibility in dealing with different fonts and font styles on the fly. OCR software using feature extraction are often called "omnifont" packages.

The second character recognition method is matrix matching or font recognition where the software is taught the characters for specific fonts along with the corresponding ASCII values. After scanning in

a block of text the OCR software checks each character with its list of stored characters. When it finds a match the ASCII character is pumped into an output text file.

The Cameron scanner comes with a matrix matching package called *Handy Reader* and has a ready installed font library which includes Helvetica, TimesRoman, Courier, LetterGothic, Pica, Prestige, Digits (numeric font), Typeface (for daisy-wheel text) and Bookface which is a mix of Times and Helvetica. New fonts can be "taught" in to the system by scanning in text and then building a new database by telling the software which ASCII character equates to which bit image.

Documentation

Documentation for the Handy Scanner comes in the form of two ring bound manuals, one for the OCR software and one for *Handy Painter*. The documentation is dreadful. Instead of employing someone who speaks English as their first language, Cameron appear to have handed the German originals over to a inebriated first year English student from the local Beer Keller. For example: "After a small run increasingly queries will be put whether the outlined character is a "...?" Yeah, sure. The heavy, twisted grammar isn't even funny like many Japanese/English translations. Machine language programmers will probably love it.

As hardware, I found the *Handy Scanner* an excellent piece of kit with its wide scan head, switchable resolution, grey scale ability and robust design. The supplied software and documentation need improvement.

Well Eunice, you know how it is, all they want to do is

PLAY GAMES

Are your kids turning into game playing techno-feebs? How can you introduce some healthy software into their daily diet of binary bytes? Anne Glover expounds on the methods she recommends in such dire circumstances

As the computer was purchased to enhance the educational opportunities of the children, you probably had some grand visions that do not appear to be materialising. Perhaps you imagined Kate at the keyboard producing assignments the teacher could actually read, Julia introducing you to the world of telecomputing and Peter setting up databases of his favourite reptiles.

The reality instead is that computer activities are limited to devious and devilish acts of death and destruction. Or perhaps Peter has taken on the persona of "Larry", Kate has turned into Carmen Sandi-WHO-go and Julia needs to save a complete colony of lemmings before breakfast!

As a result you are a bit concerned about the direction computer activities have taken in your household. A teacher may suggest you take a look at the following areas if you are worried.

- Is the child spending an "inap-

propriate" amount of time with the computer?

- Are family relationships, school-work, friendships, behaviour, social activities, sporting activities or personality suffering because of this activity?

Children and of course adults need a balanced diet, both in their consumption of food and of intellectual stimuli. This doesn't mean they need to spend exactly equal amounts of time reading as they do socialising or writing essays. They do however need variety, a range of activities to be involved in, just as they do with food. Most children will naturally select a range of inputs and provide for themselves a healthy lifestyle, even if they do need an almighty push with the homework.

Computer game junkies

An occasional child will spend too much of their time, and become too involved in the world of computer games. Just as another child will spend too much time glued to the TV or another will try to live on nothing but junk food. All of these children (or adults) need some careful redirection.

If your children are not in this category you may still be concerned that they are "wasting" a lot of time playing games. Throughout history many parents have had the same concern, maybe not with computer games but with all the other games kids enjoy. Remember that games are often the way children learn, about their body, their mind and the world around them.

My toddler's latest game is to turn things "ot" and "on", taps and sprinklers, power points and lights and even the fuse box has had a turn. He might be learning a lot but I hope the

lesson will be completed before winter time, I am already sick of being drenched. My four year old is into collecting rocks, large and small, dirty or clean, sometimes with its own wildlife attached. This is also not a lot of fun for Mum, especially when you stub your toe on them when creeping into their room at night or the toddler takes a liking to a larger one (twice the size of a brick) and he drops it on your other toe. I must grit my teeth and remember that this is how children learn, and perhaps how mothers do too.

If games are an effective way for children to learn, what are they learning from computer games?

To begin with you will need to examine the type of games your child is into but generally they can be a great introduction to computing. The kids may already be more computer literate than you are. They will be able (when they are ready) to move into more serious computing without the mental blocks that may inhibit the oldies.

Benefits

While playing the "dreaded" games the child may have developed a number of skills. These skills will vary with the age of the child and the type of games but could include: enhanced logical patterns of thought, understanding of sequences, development of memory, use of symbols, responding to actions, development of imagination and fantasy, enhanced language skills, understanding of maps, scales and directions, reading, spelling, counting, improved reflexes, keyboard and mouse familiarity, listening, concentration and comprehension skills.

Some of these skills may not translate themselves from the world of computer games, others however will help them at work and at play.

Children with special problems such as an attention deficit disorder or dyslexia could gain enormously from a carefully selected game that meets their specific needs. Here a true "game" could be a valuable educational tool.

What to do

If your Amiga is still relatively new, the obsession with games could be an early fad as they become used to the machine. Games are very attractive to big and little kids and it is understandable that they attract a lot

Continued on p24

JOIN THE Australian Amiga User Association

AmiOz BBS(02) 627 4442 24hr

The Australian Amiga User Association Inc. is one of the largest user groups in Australia, it was formed over 4 years ago to help the User get the most out of the Amiga Advanced system. Members receive help with the working of the Amiga Operating System, from setting up the Amiga, to application programs and the Amiga outstanding graphic capabilities, the members get the best help we can give through our professional Amiga Australia magazine and our Amiga only Bulletin Board AmiOz BBS. Lots of our members make there own hardware and pass them on to other members at very little cost. We have members using application programs on graphics, animation, multimedia, music and desktop publishing.

Membership includes

Amiga Australia magazine

Public Domain Software Library is one of the biggest in Australia and one of the cheapest, with over 600 disks, The A.A.U.A. has a large *Amiga* Computer Show each year for all to see the *Amiga* "The *AmiForum* *Amiga* Computer Show" members get involved helping to put on the show each year.

Our *AmiOz* BBS Bulletin Board is all *Amiga*, and runs the most unique software system in the world, *SkyLine*, and uses the *SkyPix* graphic protocol that let you used your mouse as well as the keyboard.

The A.A.U.A. has open days in the Sydney area each Month for their members to see the latest in Software and Hardware, Workshops on area of the *Amiga*, the CLI *AmigaDOS*, *WorkBench*, Graphics, Music, animation, desktop publishing and business programs.

The Ultimate AMIGA Source

of attention, especially initially. It may just be the first stage, later they may be more interested in exploring the other capabilities of this technology. So be aware that your computer's usage will probably change over time and don't be overly concerned about an imbalance in the early months.

I can remember when our Amiga was new, a friend and colleague reassured me that my "big kid's" obsession with computer games was just a fad. Her boys still play games from time to time but now use their computer for a wider range of uses. To this date I cannot say my 36 year old "kid" has such a balanced approach to computer usage.

Just as most parents monitor the types of TV programs, the videos that their children watch as well as the friends their children associate with, so they will monitor the types of software their children have access to.

If your children are spending a lot of time with the computer, then the selection of software is most important. With young children you probably have a high degree of control, as you will be selecting all of their software for purchase. As the kids get older you will need to prevent any pirated software from entering your home, not such an easy task. From a moral point of view as well as an educational point of view it is worthwhile insisting on this basic ground rule.

Much of the software currently available for the Amiga does not fit neatly into the education or the entertainment categories, programs can easily straddle both areas. After all education can indeed be fun! Some of these programs are really worth purchasing and may overcome your dilemma of too high a concentration on games. If the educational programs are fun, the kids are more likely to spend a lot of time on them.

Examples of these "edu-tainment" programs include the *Carmen Sandiego* series, *Sim City* and *Ports of Call*. If the kids are spending a lot of time with the computer, you may feel more comfortable if the games have an educational emphasis.

Another approach is to play the games with your children. You never know, you could learn a lot, both about computers and about your child, and have some fun along the way. Family relationships could improve in other areas as a result. The whole family could end up spending an "appropriate" amount of time playing games. □

1st SHAPES

by Anne Glover

How would your child like to get into a toy factory and start designing their own toys? Just imagine some of the incredible ideas in your child's head leaping to life in this factory. Perhaps a mini spaceship to take them out of this world (and maybe back again) or a little teddy that cleans up their room as it talks and plays around, or perhaps a magic wand to make their little sister or brother disappear. Wild imaginations will lead to some fanciful toys!

First Shapes, from First Byte, USA, allows your child to enter the secret domain of the toy factory. Although it will not extend as far as your child's seemingly limitless imagination, it will provide a lot of fun and serve an educational purpose at the same time.

The Toy Factory allows the child to play around with five basic shapes (circle, square, triangle, rectangle and oval) as they learn to become familiar with them. The child uses the shapes to make up their choice of 10 different toys in a multitude of ways. For example a clown's head could be any of the five shapes, as can his body and legs, each making him different from the last clown and the next clown.

After custom designing their toy the program runs through the shapes the child has used. Their toy may then be stored in their computer "Toy Box" if they wish. It can also be printed before the budding designer moves onto the

next project. This is a fun way to introduce these shapes to a young child.

Another activity on the *First Shapes* program is simply called "Shapes", this is an even simpler introduction to

the five shapes. This game shows and names a shape, then allows the child to ask for it to be made larger or smaller. So the concept of size is also being introduced.

After the child is fairly familiar with these five shapes they are ready to enjoy the "Toy Fair". Here they are required to help teddy knock the bottles down (or ring the bell etc.) by selecting the right shapes. The program may ask the child to select "the triangle", or "the smallest shape" to help teddy.

To reinforce their knowledge of the five shapes a game of concentration is included. Three levels of difficulty with a choice of playing by themselves, with a friend or with teddy give this matching game plenty of scope.

Conclusion

This program introduces five basic shapes to young children. The concept of size is also addressed. As far as it goes it is a great program. I don't see it spanning the age group suggest on the package (ie 3-8 years) but rather the 3-5 year age group. An older child having some difficulty with these concepts would also benefit while having some fun at the same time.

1st Letters Words

by Anne Glover

Here is another excellent program from First Byte. Like many First Byte products it is a quality talking program and can be custom designed (to a degree) to suit your child. *First Letters and Words* is ideal for the 4-7 year olds.

This program attempts to help children:

- Identify the upper and lower case letters of the alphabet.
- Locate the alphabet keys on the computer keyboard.
- Associate letters with words that use those letters in the initial position.
- Achieve sight recognition of a 76 plus word vocabulary.
- See how each letter would be drawn with pencil and paper.
- Take a written and spoken description and associate it with a familiar animal or object...

If all of that sounds a bit drab and boring it is only the objectives of the program. The way these objectives are achieved is through having lots of fun as you will see below.

The Magic Letter Machine carefully and slowly draws any letter the child selects from the keyboard. After "thinking" for a few seconds, the Magic Machine then produces a picture of something that begins with the chosen letter. So if the child selects "k" on the keyboard, the machine slowly and correctly draws a "k" then produces a picture of a kangaroo or a kite or a king. Different pictures appear if the same letter is selected a number of times. While this is happening the computer is talking to the child, saying "the letter k" and "k is for kangaroo" etc.

With the help of this program the child will become familiar with the letters of the alphabet, words that begin with these letters, as well as how to pronounce and write the letters - a truly "Magic Machine".

Identifying upper and lower case letters is a problem for some children. The problem may even be accentuated in these "computer toddlers" who are so familiar with the upper case keyboard. The "Card Circus" game requires the child to match upper and lower case letters to start the circus rolling. If an incorrect selection is made, that letter disappears, giving the child a better chance next time. This talking program allows the child to hear the letters pronounced and then see the clown juggle, or the teddy walk on a tightrope, etc.

For the more competent a guessing game is also included ("Who Am I"). The computer shows and reads a short paragraph that gives a clue to the animal or object in question. At the easy level the answer is also produced, the child only needs to copy it in using the keyboard. At the medium level three words are presented to be selected from (a sort of kiddies' multiple choice). At the hard level

\$100 OFF!

Audio Engineer^{Plus™}

The Top Quality Stereo Sound Recording and Editing System for the Amiga.

That's right! For a limited time only, you can trade in any old Amiga sound sampler direct to GSOFT and purchase the highly acclaimed Audio Engineer Plus for only \$329.00+P/H. That's an incredible "\$100 OFF" our normal retail price!

Take advantage of this FANTASTIC trade-in offer NOW!

Just send your old sound sampler and payment of \$329 + \$10.00 postage and handling to:

GSOFT PTY LTD. 24 Commodore Pde. Smithfield West. South Australia. 5114. Phone/FAX 08 254 2261

Signature of CardHolder.....

A.C.N 007 060 728. A working home made sampler qualifies as a trade-in. Offer Expires 31/7/91

only the number of letters are indicated. When the child types in a word all the correct letters are accepted, in whatever order. Any incorrect letters are ignored. Once the word is complete, it is spoken, spelled and a picture of the mystery object appears.

This program has a few American pronunciations and spellings, the colours are a bit drab and it probably doesn't adequately span the 3-8 year age group indicated. Apart from those shortcomings, which I think are minor, it is an excellent program. As an added bonus *Dinosaur Surprise* is included, a screen-based colouring book to add a bit of variety.

Conclusion

A fun introduction to letters and words, one well worth buying for the 4-7 year olds.

Mixed *up* Mother Goose

by Anne Glover

And now for something completely different. Remember the Sierra organisation and Roberta Williams? She designed the *Kings Quest* series amongst others. Roberta has now put her hand to a children's adventure with *Mixed-up Mother Goose* and it is a beauty!

After matching up Little Bo Peep with her sheep, for example, the completed nursery rhyme is played by a grateful little character. When the whole game has been completed the rhymes will be jumbled again, randomly, so each game represents a new challenge.

Children do not need to be able to read to take part in this adventure,

their preferred method of movement, or perhaps you could encourage them to change the method of movement from time to time.

Fortunately each game can be saved for an additional session on another day, so you won't have the five year olds up burning the midnight oil. Up to 12 different games can be saved which may be useful for teach-

Your child will be able to wander through nursery-rhyme land and meet many of their favourite characters. The player has a very important role in this adventure. As you will see, the nursery rhymes have been jumbled up leaving many distraught little people. Little Bo Peep for example has lost her sheep but has in her possession somebody's tuffet. Mary Mary (quite contrary) may have a pie but would much prefer a watering can for her silver bells and cockleshells.

The child's role is to locate the correct objects or animals for their nursery rhyme friends. Initially this may appear to be a fairly simple task, but as the land is quite large (44 screens) with 18 different rhymes to unjumble, your child will be involved for quite some time. To help them become immersed more fully into the role, several images are presented for the child to select their own representation.

the nursery rhyme characters talk to the child in words and in pictures. Humpty Dumpty tells the player he needs a ladder, then a picture of the required object appears making it easier for the child to identify it and locate it later. Only one object can be carried at a time so the child needs to trade objects as they move around this wonderful fantasy land.

Mixed Up Mother Goose is designed for children of four years and older. Many three year olds who are into nursery rhymes will enjoy this program with your assistance. Once a young child becomes familiar with *Mixed Up Mother Goose* they will probably take over, as only a few keys are needed to play the game. Characters can however be moved around using the mouse or the joystick instead of the keyboard if they wish. No doubt your child will find

ers as well. This program will be well loved by all those little kids and big kids that enjoy nursery rhymes. It has bought our old favourites into the 1990s with a bang. Not strictly an educational program but one that amply spans the education / entertainment spheres.

Certainly worth a look for something a little bit different.

Flicker Free Video™

With Flicker Free Video (FFV) and a standard VGA or multi-frequency monitor, any Amiga® 500, 1000 or 2000 computer can produce a high quality display, free of interlace flicker and visible scan lines. Installation requires no soldering or advanced technical knowledge and frees the video slot in Amiga 2000 computers for other uses. FFV is compatible with all software, works in low and high resolutions interlaced or not, and has no genlock conflicts. FFV uses a multi-layer circuit board and surface-mounted components, packing a lot of power into a very small space. Both PAL and NTSC are automatically recognized and fully supported. Full overscan is supported, not just a limited overscan. Three megabits of random access memory are used to ensure compatibility and overscan screens as large as the Amiga can produce.

INTRODUCTORY OFFER \$649.00

AdSpeed™

ICD expands its line of innovative enhancement products for the Amiga with the introduction of AdSpeed, a full featured 14.3 MHz 68000 accelerator for all 68000-based Amiga computers. AdSpeed differs from other accelerators by using an intelligent 16K static RAM cache to allow zero wait state execution of many operations at twice the regular speed. All programs will show improvement. AdSpeed will make your Amiga run faster than any 68000 or 68020 accelerator with on-board RAM. AdSpeed works with all 6800 based Amiga computers, including the 500, 1000, and 2000. Installation is simple and requires no soldering. AdSpeed has a software selectable true 7.16 MHz 68000 mode for 100% compatibility - your computer will run as if the stock CPU was installed. 32K of high speed static RAM is used for 16K of data/instruction cache and 16K of cache tag memory. A full read and write-through cache provides maximum speed.

\$549.00 BONUS \$50 Cashback on return of old 68000 (\$499.00)

AdSCSI™ 2080

The fastest, most versatile SCSI host adapter (hard drive interface) available for the Amiga 2000 now comes in a new configuration. AdSCSI 2080 is not DMA, but its clean design and advanced caching driver provide greater throughput than any available DMA interface. All the features you want are included at no additional charge: autoboot from Fast File System partitions, Commodore® SCSI Direct and Rigid Disk Block conformance for no mountlist editing and compatibility with third party SCSI devices, and the most advanced removable media support available, including automatic DiskChange and no partitioning restrictions. AdSCSI 2080 also includes sockets for adding two, four, six, or eight megabytes of RAM using 1 megabyte SIMMs. If expansion slots are in high demand then this card could be your answer.

**AdSCSI 2080 OK RAM + 52MB Quantum LPS HDD
BARGAIN PRICE \$999.00**

AdIDE™

AdIDE™ provides an inexpensive alternative to a full SCSI interface. Sometimes called "AT drives", IDE drives have an embedded controller and are designed for connection to an AT PC bus. Nearly all drive manufacturers are now producing these low cost units.

AdIDE uses the same advanced software supplied with our AdSCSI host adapters. It delivers incredible speed and performance in a very small package. Features include autobooting from FastFileSystem partitions, A-Max II support, and more. AdIDE/40 is for the Amiga 2000. It fits underneath the CPU chip and uses no slot. The included 40 pin cable connects it to standard 3.5 inch hard drives.

AdIDE/44 is for mounting a 2.5 inch drive inside the Amiga 500. It includes the standard 44 pin cable and drive mounting brackets.

**Price - AdIDE-40 \$260.00
AdIDE-44 \$290.00**

A500 Internal Hard Disk

The smallest hard drive/interface in the world is now available for mounting inside your Amiga 500! This little sweetheart gives 20 megabytes of high speed performance yet takes absolutely no desk space. Novia 20i includes complete instructions and all the hardware necessary for a simple, clean no-solder installation

INTRODUCTORY OFFER \$999.00

SYQUEST 44MB removable drive \$899.00

The Geos Column

by Owen James

Mail-merged letters. Don't you just hate computers that make out they know you personally? Of course you do. Who can stand getting letters like:

Dear John K. Citizen,

You, John, have been selected as a lucky customer that can take advantage of our incredible discounts this month. Yes, John, so why don't you and the rest of the Citizen family come out to our warehouse and be part of this unique offer etc, etc...

They're frustrating not just because they treat you like you're a personal friend, but also because it's so darn obvious they come off a template letter yet try to pretend they don't. The problem is that they're limited in what data can be changed in each letter. Sure, you can change a name, but what if you need more control?

Enter *GeoMerge*! *GeoMerge* gives you the power that you've been longing for. With this little 'power application' you can write a mail-merge letter to twenty different friends and STILL have each one seemingly unique.

Merge gives us the 'IF' and 'ELSE' commands, which allows text to be in a letter only if certain conditions are met. Let's take an example:

If I've loaned various things to twenty of my friends and I want to write them a letter stating what they've got of mine, or a thankyou note if they've returned whatever it was, I would ordinarily have a lot of typing to do. Not so with *GeoMerge*. Here's my letter template:

```
<<title>> <<firstname>><<surname>>
<<address>>,
<<suburb>>
<<state>> <<postcode>>
```

Dear <<firstname>>,

Hi! How are you? What's the weather been like at <<suburb>> recently?

<<IF returned="yes">> Thanks for returning my <<mine>> so promptly. I

really appreciate that!

```
<<ELSE>> I think you may have mistakenly overlooked returning my
<<mine>>. Any chance I could get it
back soon please?<<ENDIF>>
```

```
<<IF title="Miss">> What are you doing
Saturday night?
```

```
<<ELSE>> Catch up with you sometime!
```

Yours sincerely,

And here's what our database looks like:

```
title
firstname
surname
address
suburb
state
postcode
mine
returned
*
Mr.
Melvin
Bore
16 Main Rd
Nerdsville
QLD
4029
Wild World of Chess book
no
*
Miss
Cass Ette
Lot B James Rd
Katoomba
NSW
2780
Pink Floyd tape
yes
*
```

The first section of the above list is the label records. It tells *GeoMerge* what labels will be used in the document. After the asterik our data begins which will be substituted for the labels in the template document. Here's what the two sample letters would look like:

```
Mr. Melvin Bore
16 Main Rd,
```

Nerdsville

QLD 4029

Dear Melvin,

Hi! How are you? What's the weather been like at Nerdsville recently?

I think you may have overlooked returning my Wild World of Chess book. Any chance I could get it back soon please?

Catch up with you sometime!

Yours sincerely,

```
Miss Cass Ette
Lot B James Rd,
```

Katoomba

NSW 2780

Dear Cass,

Hi! How are you? What's the weather been like at Katoomba recently?

Thanks for returning my Pink Floyd tape so promptly. I really appreciate that!

What are you doing Saturday night?

Yours sincerely,

As you can see, because Melvin hasn't returned my book he receives a polite letter asking for it back (note the word POLITE here!).

And because Cass has returned my tape on time she gets a thankyou note. Notice also that Cass is a 'Miss' (Missed out?) and so we've asked about Saturday night!

So how do we go about creating a *GeoMerge* document? We need to begin by thinking about the data that we need changed between letters. Obviously names will be different in each copy, and possibly addresses also. Then we need to think about other changes. For instance you may want to ask all your friends that own a 64 whether they know a cheat for a certain game, or you may want to ask your Amiga owning friends if they have any of the latest Fish disks.

To make all these sorts of changes we use what *GeoMerge* calls 'labels'. Labels are very much like the variables you use in BASIC in that they hold certain data that can be recalled and acted upon later. See the use of labels in the above letters? The template letter uses title, firstname, surname etc. With each letter that's printed, the information in these labels will change depending on the contents of our database.

We can also control the way *GeoMerge* acts on the contents of our database. For example we could print certain lines of text only if it relates to

particular people, like if they owe you \$100, if they're single, or you might want to send sympathy if they're an Atari owner! Just use the IF-ELSE commands.

That's just one very simple use of *GeoMerge*, but it's much more versatile than that. You can actually use data from *GeoDex*, *GeoFile*, *GeoCalc*, or just about any other text based GEOS application. Using the text grabber application you could probably even use data from other programs that don't run under GEOS.

You could import figures from *GeoCalc*, match it with information from *GeoDex* or *File*, and create letters according to the result. Unfortunately the manual doesn't go into great detail about this, so a lot experimenting will be needed. Don't worry about this. Experimenting is one of the best ways to learn, and you may even find features that aren't supposed to exist.

Recently I was using *PageSetter II* on the Amiga and discovered that contrary to the manual (and what everyone else says) it does support flexible spacing in between individual characters - a powerful feature that is

normally reserved for the high-priced publishers. Experiment with the software you own and I guarantee you will learn more than any manual can ever tell you.

GeoMerge will even reformat your document according to the size of the labels. So if one of the names in your database is Georgina Poppadopolous, *GeoMerge* will wrap the words that won't fit onto a line.

Another important feature of *GeoMerge* is the ability to enter merge data manually. Great if you find you need to create a merge letter 'on the fly' and don't want to go through the procedure of adding to a database.

Do and don't tips

And now some 'do and don't' tips for all potential *GeoMerge* users:

DON'T use people's names to a ridiculous extent in a merged document. Just use them like you would if it was a normal letter.

DON'T try to pretend it isn't a merged document. Most are obvious anyway.

DO get the database right! Spelling

errors are fatal in a merged document because the words of the database are quite often used more than once. Also, if you miss parts of the database you might just end up with statements like "Could you please return my Katoomba", or worse "You're a great friend, Pink Floyd tape". Get the message?

DON'T use *GeoMerge* for every letter you write, especially if they're to close friends. Lines like "You're my best friend, <<firstname>>", really don't go down too well!

GeoTips

With the ability to use an Apple Laser printer with GEOS came special fonts to match. In case you're wondering, these laser fonts can be used without any hassle on a normal dot-matrix printer. Some people claim that the prints made with these fonts are better than the usual ones. Give them a try and see for yourself.

We all know that GEOS is heavily copy protected for a good reason, but the trouble is that sometimes there may be a genuine need to make a back up. For example, perhaps both our system disks decide to cease doing their thing because of drive head alignment problems, or we're the lucky owner of a 1581 drive and want to boot from a 3 1/2 inch disk. All these troubles could be over if you can locate a PD program by the name of *Vorpal Aid V4*.

I'd first heard about this from an American Commodore newsletter that was sent to me by Marc Walters (thanks Marc!). Evidently it's been available for a while, but does anybody know where?

One fantastic application for this program would be to make a backup of GEOS but instead of saving it to disk, putting it on an EPROM or even the Quick Brown Boxes (a battery backed memory device). Imagine it - GEOS automatically there and waiting for you with the flick of the power button. Even with saving to disk you could use faster disk turbos than GEOS provides without interfering with copy protection.

Anybody that has *Vorpal Aid V4* or knows its whereabouts would be a friend for life if they contacted me!

That's just about all that time and space permits for this month. As you can see, *GeoTips* are a little scarce so I want yours! Send them care of:

First of all, thank you to everyone who has written in to Australian Commodore and Aniga Review. Unfortunately we cannot promise to answer every letter individually, but we'll do our best. If you keep your letter reasonably short and to the point it will be published.

Letters TO THE EDITOR

We do read all letters regardless, and often the answers you're after may appear in one of our regular columns. We can answer quick questions over the phone, however we recommend you contact your local user group or software supplier for in depth problems.

Ideas to improve ACAR

I have just finished reading the January 1991 issue of ACAR, and it was most enjoyable. I feel it competes well with the majority of other Amiga and Commodore magazines which are imported into the country. Its most appealing feature of course is the price. How can it be so cheap? However I do have to make some comment on the fact that there was only one page of letters - surely there could be at least three or four. How about some sort of forum for readers to exchange hints and tips on productivity titles, not just games?

Regarding your comments on Shareware software, I think you are indeed right that you should consider any money being exchanged as payment for what you have already and you should not expect updates as a right. However, it would be quite dishonest for a programmer to keep accepting payments if they have no intention of releasing upgrades. The problems arising from this are clearly stated in this article (by Andrew Leniart).

Maybe the public domain software library companies could act as intermediary by spreading any of the programmer's correspondence amongst Amiga users and accepting the money on the programmer's behalf and then passing it on to him. In this way, the public domain distributors could pass on any updates quickly because they would have regular correspondence with the programmer. Also the distributor would know what programs were being supported by the public. This way we would know how much a programmer was making and would know when we could expect an update, or if he was making no money we could cut our losses and be happy with what we have.

Graham Rutherford
Devonport, Tas

Ed: We will try to keep letters a good size so you have plenty to read in each issue. Your idea about a forum for serious users is great - we'll look at kicking off a productivity column with a letters section in our April issue.

Regarding shareware, I think you've missed the point entirely. The whole idea of shareware is to remove the middle man and keep the price down. If public domain companies had to accept money, handle correspondence, provide support etc etc... then they would in fact be acting as

a commercial distributor. The whole business of updates and getting value for money is a complex and cloudy subject. On closer examination you'll find what is promised and delivered differs from one program to the next. Watch our public domain column for discussions of these issues.

1581 User

I am writing to you regarding a small magazine that we have set up for Commodore 1581 (3 1/2") disk drive owners. As you are aware, Commodore never saw fit to import these drives, and only one Australian dealer (HPD) saw fit to bring them in. Many more, however, have been brought back via friends and relatives, etc., and as such it is anybody's guess as to how many of these are in Australia.

A small band of West Coast 1581 users have decided to set up a Magazine as a support group for those who won this scarce drive. We aim to establish a reference of what will and won't work on a 1581. The magazine is aimed at 1581 users in particular, but may also be of interest to those with Hard Drives, or other non-1541 compatible drives. We feel that a magazine is the preferred option to a bulletin-board system, as benefit would be restricted to those with modems, and would be more costly, due to most users needing to pay STD rates to connect.

Our support is aimed directly at the 64/128 users running 1581's or other non-1541 compatible drives. Subscription is \$18 per year for 6 issues, and cheques and money orders can be sent to:

1581 User PO Box 323
Maddington WA 6109

Phil Arntzen
Editor 1581 User.

Ed: Well done, guys. We look forward to seeing your first issue.

How to market games?

I want to become a graphic artist/game designer. But after designing a couple of games, I don't know where to send them, so could you list some names and address of publishers or whatever for me, thanks.

P.S. The games are a mixture of arcade/adventure and strategy.

Dean Grubb

Ed: Try sending us a copy for starters - we may well be able to point you in the right directions.

THE BEST IN AMIGA PUBLIC DOMAIN!

Get your PD/Shareware software from the people who get it first and know it best or make it. We don't send out viruses, or single-program disks. We give away a *free Catalogue-disk with Virus-killer & tutorials*, updatable free at any time, and we have no postage charges. We know the Amiga and have supported it from the start - we've been producing Megadisc, the all-Australian disk-magazine for the Amiga since 1986. We can help when problems occur. We invented Theme Disks, and have the best. Call and find out. Toll-free. Our prices are the most competitive, and our service is immediate. Both are even better if you become a subscriber to our disk-magazine, which is unique! Try it.

OUR COLLECTIONS

Uniquely Ours:

Topik Disks

"Best of Fish" Disks

Megadisc Theme Disks - Animation,
Demos, Utilities, Graphics, and others

The Old Standards:

The AmigaLibDisks (Fish)

T.B.A.G. & AmigOz Disks

The Defunct but available:

Amicus, Amigan, F.A.U.G., C.C.C.C., etc.

MEGADISC, P. O. BOX 759, CROWS NEST 2065. TOLL-FREE: 008 227 418 ENQUIRIES: (02) 9593692 FAX: (02) 9593525. We take major credit cards by mail or phone, and we are FAST!

SCANNERS FROM \$299

The IMG printer head scanner uses fibre optics to "read" the image
- up to A4 size and is only \$299!

Available From:

Maxwells Office Equipment (Vic.) Computer
Spot (All Branches) Grace Bros., The
Gamesman, Myer, Harvey Norman, Game
Wizard, Harris Scarfe, Midi Mouse
Computers and all good computer retailers.

HAND HELD SCANNERS

Type 10: The only AMIGA Scanner (we know of) with OCR software that allows you to scan TEXT! Then use it in your word processor, desktop publishing package etc. Can easily be trained to recognise ANY font (but recognises most fonts automatically).

Type 6: You want colour, we got colour! A 4096, H.A.M. mode scanner at a believable price. The TYPE 6 HAND SCANNER can scan in a full colour image in 16 or 32 colour resolution, Extra Half Bright Mode or H.A.M. (4096 colour) mode.

VIDI Framegrabber

Use any
video source
inc. cameras,
VCRs etc

Now you can make your own Clip-Art, Video Effects and
digitised images (even animations in black and white). Quickly and inexpensively.

Only \$399 with Vidi Chrome colour software and filters.

* RGB splitter also available.

C64 Sound & Graphics

by Greg Perry

Now we have our sprites set up, let's look at how we can use them in our own programs.

We will look at a number of simple but interesting techniques which you should be able to adapt to your own programs.

Example: sprites as string data. The following program displays three sprites using the same sprite data for each. The sprite pattern of the number 64 sitting under a palm tree, is set up in the data statements as string data. This pattern can be readily changed by editing the program in the normal manner.

Calculation of the correct 63 numbers for the sprite pattern is done by dissecting the strings (check out the method used and work out how it does it, Lines 320-350) and the numbers are shown on the screen as they are calculated. An "A" in the data string is taken as a screen dot with bit value of 1 and a space is taken as bit value of 0. The sprites used are sprite numbers 0-2.

Points to note:

- All three sprites use the same data block
- Remember that sprite 0 has priority over 1 and 2 and so will appear over the top of the images of the other two.
- The sprite-background priority has been altered for sprite 1 so that it will pass underneath the screen image.
- All the sprites are programmed to randomly expand in either direction when they cross at the centre of their travels.
- For simplicity, sprite X position is never greater than 255.

890 DATA " A AAAAAA AAA AA A "
900 DATA " A AAAAA AA A "
910 DATA "AAAAAAAAAAAAAAAAAAAAAAAAA "

```

Exercises

1. Design your own sprite in data statements.
2. Change sprite colours.
3. Change sprite movement routine.
4. Change movement to include full range of X 0-344.
5. Change expansion to X or Y expand only.

Example: Bouncing and full range of X. To program a sprite to "bounce" around the visible screen area, like a ball on a billiard table, involves increasing or decreasing the X and Y coordinates and ensuring that, when the boundary (as defined above) is reached, the corresponding X or Y movement is reversed in direction. This is shown by the following subroutine.

Add these Lines to the program above.

```

550 REM RANDOMLY BOUNCE SPRITE
560 IF RND(0)>.2 THEN GOSUB 590
580 REM BOUNCE SPRITE AROUND SCREEN

```

WE CAN BEAT ANY ADVERTISED PRICE! BUT WE SELDOM HAVE TO - OUR PRICES ARE THE LOWEST! (IF YOU SEE A LOWER PRICED ITEM, TELL US, IF YOU DON'T, TELL YOUR FRIENDS.)

TURN
680 GOTO 600

```

Notes

1. Line 590 sets the starting coordinates.
2. The RND statements are used with great effect to decide how often a bounce will occur and, when one does, to randomly select which of the sprites 0-2 will move and in what direction.
3. S1 and S2 are the signs of the X and Y movement respectively, i.e. when $S1 = 1$, the X value will increase and when $S1$ is -1 , the X value will decrease. At the boundary, the sign of the movement is simply reversed. Line 592 randomly sets these to either 1 or -1 . The expression $2*(RND(0)>.5)$ is zero if $RND(0)$ is less than 0.5, otherwise it equals -2 .
4. The full range of X is used, Lines 640 and 650.
5. Line 670 returns to the main program if the bouncing sprite is roughly near the other two. ☐

Tutorial

PART 11

by Andrew Leniart

The number of letters asking for help that have been flooding in to my post office box is pleasing to say the least. So much so that I have decided to take a break from discussing commands this issue and come good with the promise I made in the last issue of ACAR.

This month, the column will be devoted to answering your queries and trying to solve some of the problems that you are having. If you find that you have missed out this time, please be patient. All letters will be covered at some stage eventually.

Shell window

Our first problem comes from Steven McKinlay at Doncaster VIC who writes:

Dear Andrew, Your past CLI tutorials have been extremely helpful so I wonder if you can help me with this small problem. On one of my disks I like to load (or actually leave) a CLI window open on the bottom of the screen after booting up with that disk. So, in the startup - sequence, instead of having endcli at the end of it, I just shrink the window down to a smaller size and display some text in it saying something about the disk or some reminder notes I had put in the startup-sequence last time. In this way the CLI is conveniently ready to use straight away or whenever I need it.

That's not the problem though. What I really want there is a Shellwindow (instead of a CLI) and all the text from the startup-sequence to be displayed in this shell window. Is it possible to do that from the startup-sequence and if so, how?

REPLY: Well Steven, first of all, you neglected to mention whether or not you were using the 1.3 version of Workbench or whether you are still using the old 1.2 version. If the latter is the case, then you can't have a Shell instead of a Cli as the 1.2 version of AmigaDOS does not support shells.

If you do use the 1.3 Version, then

to get a Shell instead of a Cli, then instead of issuing the command - NewCli - simply make the entry NewShell and you will have it.

In regards to having the text from your startup-sequence appear in this window, then yes, it is possible, but why do you wish to do it that way? Try this out for size - Make a blank space somewhere before the end of your startup-sequence and enter the following commands / lines:

Dir Ram:

Copy Df0:s/startup-sequence Ram:

What this will do is actually create a file in RAM: by the name of "startup-sequence" which you will then be able to view at leisure whenever you choose by using one of the many text readers avail in the Public Domain or via the "more" text viewing utility. A lot neater way of achieving the same result and saving yourself the hassle of a cluttered CLI window at the bottom of the screen. Try it, you'll like it.

Corrupt disks

Our next problem comes from Andrew Gormly of Walkerville, SA who writes:

Dear Andrew, When I first bought my Amiga 500 in 1987, a short time later nearly all of my store disks came down with the "Disk structureCorrupt" syndrome. Six weeks and \$50.00 worth of CLI books later I managed to suppress the problem and clean all my disks. I have never seen it happen since (except for when I accidentally took my Bards Tale disk out too soon!) I do not know if anyone else has had anything like this, but it spread exactly like a virus does - infecting write-enabled disks when placed in the drive after a warm boot. What was it? How did it happen? And will it come again?

REPLY: The problem you describe sounds suspiciously as though a virus was infecting your disks at the time. Even if you had been checking your disks regularly with a virus checker, the one you were using may not have been able to find it. The reason you managed to stumble across

a fix to the problem could be that by going through all your disks you somehow managed to eliminate the culprit from your disks.

It has happened to others, indeed, it's happened once to me so don't feel as though you are the only one. Whether or not it will happen again depends on how stringent you are with new software that you get.

I find that a good rule to follow is to assume any new piece of software is virus-ridden until proven otherwise. Get yourself a good virus checking program like ZeroVirus by Johnathan Potter or NoVirus by Nic Wilson and check each new disk you get before trusting that it is clean.

Don't forget to check for both file (link type Viri) as well as boot block culprits as both are unfortunately plentiful.

Script files

Moving onto the subject of Script files, Harry Kloppenburg of Thornlie in WA had this to say:

Dear Andrew, Many thanks for your informative articles on the CLI.

There are indeed many glitches, limitations and possibilities in CLI commands that are not directly obvious or explained enough. My particular problem has been with the nesting of commands in a scriptfile.

Is progressive indentation in a script file necessary or just a case of neat programming? I found some examples of nested programming in Abacus books hard to follow (using IF/ELSE/ENDIF or similar commands). One or preferably a few examples of this will be greatly appreciated. Thank you kindly for your efforts.

REPLY: Ok, for the benefit of those that may be a little in the dark on the subject of script files, let's start at the beginning. What is a Scriptfile?

A script file (sometimes referred to as a batch file) is a text file that can be written or created with any text editor like ED on your workbench or even NotePad.

Their purpose is usually to make life easier for you when working in the Cli by enabling you to execute several commands one after the other simply by executing the one script file.

There are a couple of rules which must be followed when writing a script file which might be worth mentioning here.

All Amiga Repairs			

Firstly, the written file **MUST** be saved in straight ASCII format. Most-text editors like Ed or Notepad will do this automatically. If you use a word processor to write your script files, then you need to make sure that it has the capability to save the file in Ascii format. Wordprocessors can often put in weird little control codes in files not normally visible to you which cause havoc when AmigaDOS goes to read the file.

Another important rule which 'must' be followed is that an AmigaDOS script file may only contain AmigaDOS commands and routines and nothing else. The reason for this will become apparent shortly. An exception to this rule exists if you have some other (third party) commands which you have obtained in the Public Domain libraries or from some magazine coverdisks or wherever.

What a script file looks like

A very simple script file could look like this:

```
Echo "Script file just executed"
Echo "Wasn't that fun?"
Echo "End of Script File"
```

That's it! If you were to type this useless three liner into your favourite text editor and save the file with a name like "Example" then you would be able to execute it in a Shell or Cli. Type "Execute Example" in a Cli or Shell and the result will be the three lines above being displayed in the Cli window the script was executed from.

In reply to your question on whether or not command indentation is necessary in script files, then the simple answer is no. It depends on your personal taste. Some people like to indent their script files as it makes them easier to follow, for THEM. Others, like yourself, feel differently. Look at the following two examples of a simple startup-sequence. One is written without indentation, the other with. But both would work equally well:

Example 1

```
ask "Load WorkBench? (Y-Yes N-No)"
if warn
echo "Loading Workbench"loadwb
```

```
else
echo "Ok, CLI session then.."
quit
endif
ask "Open a small CLI as well? (Y-yes N-No)"
if warn
newcli "con:0/0/200/50/Newcli"
else
endcli >nil:
endif
```

Example 2

```
Ask "Load WorkBench? (Y-Yes N-No)"
If warn
Echo "Loading Workbench"
LoadWb
Else

above, nor does not matter if the commands or text contained within a script file are written in CAPITALS or lower case. Look through previous issues of ACAR for more examples on script files and how to take the best advantage of them. In any case, I liked your letter so a PD disk is on its way for your input.

Redirection

Next problem comes via Penrith in NSW where Michael Davis writes:

Dear Andrew, thank you for your great tutorial on the CLI. It is past the time when this should have been attempted. I have had an Amiga 500 for two years now, and using the magnificent Commodore instruction book I have been totally confused. [AL: Wasn't that the purpose of the book in the first place?]

I am having a problem with two commands, first the redirection. When I enter:
"Type > prt: opt a"
the Amiga responds with
"Error - Unable to open the redirection file"

I ask it why and it tells me that the last command did not set a return code.

*The other problem is the "Copy * to prt:" The Amiga says "Can't open prt: object in use" so again I ask Why and get the did not set a returncode routine. I have tried both Workbench 1.3 and Workbench 1.3.2 with ARP installed, with the copy command, I used "Copy * to par:" and this seemed to work ok.*

REPLY: I've never struck this problem before and had no luck in trying to reproduce it on my Amiga 500. However the error you are getting in your first problem indicates that the Amiga is having problems locating the printer and the fact that Copy * to par: works ok indicates that the machine is using the Par: device to use the printer rather than Prt:

Try going into Preferences and changing the Par/Serial setting from one to the other and see if that helps. If it doesn't then perhaps some other readers have experienced the same problem and may be able to offer some help?

Fat Agnus

Wally Kerr of West Geelong in Victoria writes:

Dear Andrew, Thank you for your great article CLI Tutorial in ACAR - it has been a great help to me and there must be thousand of others. I am using an Amiga 500 with a 512k expansion with workbench 1.3V.

In your last article in ACAR part 8 about mounting RAD after following your steps I could not after rebooting get a RAD icon. The only way I could bring up

an icon upon boot up was to either copy something to RAD first or DIR RAD in the Shell after which an icon would turn up called RAMBO and not RAD.

Is this normal or am I a novice with the Amiga doing something wrong?

Also can you tell me and others about the new Fat Agnus Chip? I have been told it is in the new Amiga 500 but you must have a modification done inside the AMIGA. What does this chip do and is it worth having this modification done?

And can you recommend any PD or commercial programs for checking the operation of the Amiga. I sometimes have program crashes and Guru's coming up on screen. I have used a memory diagnostic program and have no memory problems. Will a disk drive with dirty heads cause the Amiga to guru?

REPLY: Hi Wally. The problem of a RAD icon not appearing automatically after boot up is almost surely being caused by the fact that your machine is fitted with a 1.2 version kickstart Rom. (Read only memory chip). That's what gives you the insert workbench hand prompt when you first power up your machine. You could take your machine to your local Comcare centre and have the 1.3 Rom fitted to your machine, but a cheaper and easier solution is this:

In your startup-sequence somewhere after you have "mounted rad", simply put in another line with "Dir Rad:" and the problem will be fixed. You can then rename the Rad disk to whatever you like by inserting another line underneath that one which contains "Rename Rad: <Newname>".

If you opt to go for the upgrade chip, then you could have the new Fat Agnus chip fitted at the same time.

The difference between the newer Fat Agnus chip and the one you have in your machine at the moment is actually quite dramatic. The Agnus chip in your machine at the moment can address 512K of Chip Ram. Chip ram is needed for any graphic capabilities on the Amiga including the windows used for workbench etc. It is a totally different beast to fast memory (ram:) that you get when plugging in the A501 memory expansion for example so should not be confused.

Fat Agnus on the other hand has the capability of addressing 1 Megabyte of Chip Ram. With it, you have double the graphic capabilities on your machine than before. ie: You could have twice the amount of windows open on workbench than you could before and not run out of Chip Ram. A highly useful and needed feature if you plan to do a fair bit of work with applications such as *Deluxe Paint*, digitising or similar.

While it is possible to buy a Fat Agnus chip and fit it yourself, a few modifications are needed to be made to your machine so it is highly desirable to have the chip fitted by a qualified computer technician.

As for your last query, yes, it is possible for a disk drive with dirty heads to be the cause of a guru but unlikely if you are not getting read write errors from your disks normally. Rather, I would be looking towards the application I was running at the time of the crash as it would more likely be the cause.

PD diagnostic programs do exist, though I've never used one myself so can't recommend one for you as you asked. The place to look for one would be in a good PD catalogue that lists the various Fish disks and others. There are a few excellent PD distributors around that have a catalogue you could get hold of and check out. Two come straight to mind and those are *Prime Artifax* and *Megadisc* both advertised in each issue of AC&AR.

Printing your artwork

Steven Williams of Gosnells in Perth WA writes:

Dear Andrew, My question concerns computer art, as I have purchased Deluxe Paint III and seen the results that can be obtained, is there a way to have good quality prints made? It seems that no dot matrix can achieve this as mentioned in an article by Alan Kirk in your magazine about the Epson LQ860 printer. Then how do you get what you want without purchasing an Inkjet printer, which is way beyond my financial means and most everyone else's. Is to get your work of art as you see it on screen, to paper, an impossible situation?

REPLY: Your problem of getting good quality printouts without it costing too much can be solved by finding a firm or third party which will do it for you. Look for ads in magazines as there are often people advertising a service such as this. A few are Desktop Utilities in Canberra, Megadisc and Prime Artifax.

Alternatively, if you have a modem or know a friend that has one, try posting a couple of messages in echo areas on the bulletin boards asking if anyone would be willing to print your works of art for a reasonable fee. Tried your local user Amiga user group to see if they have access to a printer that will do what you need? Use a bit of imagination and pretty soon you will have contacts all over the place.

Well, that's about it for this month. I think I've just about covered the majority of queries readers have had. While I don't have the time these days to enter into personal correspondence with readers, I will continue to answer as many letters as I can through these pages spread over future issues so please keep them coming.

Till the next time, keep hammering that keyboard. □

The C64 Column

by Owen James

Detachable Keyboard

In the news this month is word of a detachable keyboard for the C64. I haven't heard a great deal about it as yet, except that it has a six foot long cable between the keyboard and the C64 to allow the most comfortable position for typing. I hope the keys are set out like those of a standard keyboard!

The people to contact are:

SER, PO Box 85382,

Racine, WI 53408, USA

The cost is \$US45 +\$3 shipping and handling. No sign of them in Australia - is someone reading this?

Reach your potential

This month I thought we'd take a look at using the C64 to its full potential. Sure, everyone knows about using it for word processing and playing the odd game but that's not all that the 64's good for. Read on and learn how versatile your 64 really can be.

EDUCATION: We've all seen those cute little programs for junior that show flashing numbers, bouncing turtles, and animated bears that have somehow been given the power of rational thought. Great, but how about us big kids? There's a noticeable shortage of educational software for the over 10's, so it's up to us to write our own.

Next time you're studying for the HSC, a diploma, or just coming to grips with learning to program, write down some questions that are related to your subject. Think

about possible exam questions, or questions that you know you would have difficulty in answering. Write yourself a simple database program with the questions and answers in DATA statements. Have the 64 ask the questions and then request an answer in a simple INPUT command. The 64 can keep repeating the ones you get wrong until you get each question correct every time. This is based on the method of 'Socrates', where simple questions are repeated over and over again until any weaknesses are ironed out through repetition of the questions and answers. Simple, but very effective.

CATALOGING: You may have catalogued all of your disks so that you know what files are where, but what about everything else? Use your 64 to catalogue your CDs, videos, or bottle top collection.

Even more productive is using your 64 to catalogue magazines. I get just about every C64 and Amiga magazine I can lay my hands on and, as you could imagine, that adds up to quite a few mags. The only trouble is that when I'm looking for a particular article I can spend a complete weekend searching. My solution was to put together a little program that catalogues my magazines quickly and simply. When I need to look for an article I just type the subject name, such as 'music' and it will give me a complete list of magazine references. I could even be more specific. For instance if I'm looking for a particular programming article that I know was written by Mark Jordan I can choose to type in his name as well to give a more specific list.

Game cheats are also great for this. Catalogue your game pokes etc. When you're finding you're having trouble with Batman, for instance, type 'BATMAN' and have your program give a list of magazine references for pokes.

PERSONAL INFO: Keep a diary? How about computerising it? Using a simple word processor, or even your own software, you could keep track of what you did, when, and where. In years to come, when friends have boxes full of large, bulky, paper-based diaries, trying to work out what to do with them all, you can pull out your two or three disks containing your complete life story and read what you were doing way back in 1991. And if you can

Amiga-Live Issue Six

\$24.95 (3 disk set)

FEATURE Game

Drip: A full blown arcade game that's very out of the ordinary. It's up to you, as the 'Drip', to rust your way up 15 floors and get the juices flowing again. Avoid running or dripping into the acid, plasma and icecubes shooting out of pipes. You can get a little help from party balloons and bubbles that float by. Drip requires 512k of memory.

Entertainment

BoingDemo: Despite the name, this is not a demo as such - it's one of those try before you buy versions of a commercial game, only this one is very playable. The Boing part is a salute to the original Amiga Boing Demo! In this level and ladders game, you travel about on poles, ladders, teleport points and at all costs avoid the Boncing Amiga Ball!

RollOn: The play is a little like Boulderdash or Emerald Mine. Eight levels are included. To win you need to plan ahead and organise your moves carefully - sort of a joystick strategy. Includes a level editor to design your own games.

SlotCars: A complete working game of SlotCars...just one of four games in the commercial package known as: 4 IN ONE - EASY BUT FUN! The game concepts are simple but addictive. A combination of strategy and dexterity is needed to beat this one.

MoonBase: Adventure/Arcade - guide the shuttle ship to and from the mother ship with the valuable cargo. A multi-level lunar lander.

Strategy

Turn: A strategy game - the aim of which is to produce a given pattern of stones on the board. In order to complicate the game a little bit, all stones around the selected stone will turn either from black to white or from white to black. There are 18 levels available. There's also a pattern editor to design your own games.

China Challenge: Similar to the well known game Shanghai or Mahjong, the target of China Challenge is, to remove all parts of the pile, the so called Dragon, step by step. This dragon is composed out of 120 different pieces. A challenging past time, fun for two players too!

MarbleSlide: You've got to be quick to get this one. This is the fullest extent to which we've ever seen the old magic square theme taken - and one of the best. Slide the sliders to guide the marble home. But your time is VERY limited!

AmiGo: Strategy Board game for one, two or no players!

Workbench

SimGen: How would you like Saturn on your Workbench? SimGen makes your screen look like it is Genlocked. A number of example images are included. Much better than DropCloth or any other of these Workbench background programs. Doesn't slow your Amiga down either!

Flip: This screen gag will drive you nuts. Try it out!

Rocket: Yet another in the great line of Workbench gags. This little number releases a guided rocket which heads straight for your mouse pointer. If you don't move in time, on impact the whole lot explodes. Stick it on a friends Workbench for fun!

Business

Liner: Our serious program for the month. If you develop out-lines for speech, writing, essays or reports, this program will help you organise and edit your material in point form - the best way to develop an outline. A fast solid program.

WO: A short and quick utility, which helps you to bring order in your addresses and codes them and saves them (password-encrypted) on disk.

Graphics

MandAnim: If you enjoy madlebrots, you'll love MandAnim. Using a simple tweening process, you can select multiple key areas of a mandlebrots. MandAnim will generate as many steps as you specify between each frame creating an expanded animation file which you can load and animate in Deluxe Paint III. Some impressive graphics can be achieved.

Hennon: You can create some fabulous looking images using this program which lets you explore Hennon mapping. The program produces patterns like the one below using the formula $x = x * \cos(a) - (y - x * x) * \sin(a)$ and $y = x * \sin(a) + (y - x * x) * \cos(a)$. Several example images are included. Full 640 x 400 hires is supported.

plus FREE \$5.50 Graphics or Animation disk of your choice with Amiga Live 6.

Save on Back Issues!

Amiga Live #1 (2 disk set)	\$8.95
Amiga Live #2 (2 disk set)	\$11.95
Amiga Live #3 (3 disk set)	\$18.95
Amiga Live #4 (3 disk set)	\$18.95
Amiga Live #5 (3 disk set)	\$24.95

NEW THEME DISKS!

Emulators and File Transfer

Transformer v1.22 \$7.95

Get into MS-DOS on the cheap. Much faster than the original Transformer. 68030 compatible. Requires MS-DOS on a 720K diskette. No documentation.

MS-DOS Theme Disk \$5.50

Install a full MS-DOS device using a simple install icon. You can then read/write 720K IBM disks and format them too! MSH: acts like any other Amiga device. You can share the selected drive between MS-DOS and AmigaDOS. Full documentation and other useful utilities included.

Atari Emulator \$5.50

Despite the German menu titles, it is possible to put this Atari emulator which runs in low, medium or hires to some use. Will run some applications and can be used to view Atari graphics. Assorted other utilities are included on the disk.

C64 Emulator \$5.50

A very full-blown C64 emulator. Lots of utilities, more menu control and transfer options than previous commercial programs. If you like what you see you'll need to purchase the serial interface direct from the U.S.A. - full details included with the disk. Full documentation on disk.

NEW Educational

Chemistry \$5.50

Chemesthetics allows you create a atomic model of different formulae and visual chemical structures - a great teaching tool.

The best way to enter into the world of Ray-Tracing, DBK-Render allows you to create some amazing scenes.

\$5.50

lay your hands on a copy of 'Hey, big mouth!' or another speech synthesis program you could have your diary actually read back to you. And because it's on computer, you won't have to worry about reading your own handwriting in years to come!

How about personal details? I'm sure we all worry about keeping bank account details, pin numbers, and tax file numbers written on paper in fear of them getting into the wrong hands. Keep them stored on computer. Most database programs have a password option if you want to be really secure, but because the details are paperless home users won't have to worry too much anyway.

And time scheduling? Computers are great for this. Plan your time using any one of a number of programs. Appointment Manager, from one of the Suite 64 disk magazines, is great for this. Shame it hasn't got an alarm feature to remind you of where you should be and when! Paper-based time scheduling is messy because no matter how carefully you plan it out there will be changes, re-changes, and re-re-changes, which adds up to one very awkward appointment book. Be efficient. Use the 64!

CONTROLLING EXTERNAL

DEVICES: The 64 can control lights in your house, model railway sets, radios, alarms, and just about anything else that uses a switch. I'll be honest and admit right here that I've never tried to myself, but I've seen many books on doing this using a 64, and even one or two working examples. The Beyond 2000 Science Awards some years back had one entrant using his 64 as weighing scales which gave a digital display on screen. Great ideas that the C64 is more than capable of.

BUDGETING: Not only can you see all your hard earned cash being spent on worthless items, but with a 64 you can see it in FULL COLOUR WITH SOUND! Your 64 won't care about being subtle when it comes to reporting your financial affairs! Watch animated graphs slowly falling towards the zero line. That's the fun of computerised accounting and budgeting.

If you want to be boring, though, you might want to just keep track of cheque numbers, bank balances, and bankcard debts without the bells and whistles. It is more accurate, easier, and uses less paper (who said computer addicts don't care about the environment?).

HOME SHOPPING: Get to know what on-line services are available.

Telecom's Discovery service is great for a number of purposes. 24-hour news, sport, and weather, electronic banking, booking holidays, betting. It's all there. Even some Australian computer magazines have their articles on-line to read or down-load.

ON-LINE FRIENDS: A modem is a communications aid, so communicate with it! Make friends with other BBS users. Get a computerised pen-friend. Use it to meet other people with a computer obsession.

The above short list is just a sample of some of the more interesting things the C64 can be used for. There are thousands more just waiting to be discovered. I'd even heard news about a person linking three C64s together to create a three manual organ. This was nine note polyphonic (that's more than my Technics SX-E8L!). An out of the ordinary use that just goes to show the versatility of the 64.

Letters

Since my article on the MCS 810/820 a few months back I've received word from numerous individuals who say that the situation is much worse than I thought. Here's a sample of the mail:

"...after about one month an unprinted line appeared on the paper. Being a good operator I read the instruction manual which said to clean the head, this did not, however, have any effect. So off to the service agents who tested the printer and informed me that the head had failed and I would have to buy one (\$90.00), as they only have a one week warranty!!!

"Needless to say I was not impressed so I wrote to Commodore who informed me they are a "consumable" (A \$90.00 consumable in a \$300.00 printer?). However, under the circumstances, they would provide me with a new one free of charge, this arrived, was fitted and things returned to normal.

"Just when I'm getting to grips with using it all, you guessed it, the printer head failed again, at nine months.

"I therefore called the Customer Service dept, in Sydney, and had a long talk with the supervisor, who agreed with me, that I had experienced more than my fair share of problems. It was arranged that Commodore would take my MCS 820 as a trade-in on either a Commodore 1230 or Star NX 1000CL.

"I'm sure that if every person who is dissatisfied with his/her printer, wrote to Commodore and complained

perhaps something would be done about it."

*Stephen L. Hack,
Carindale, Brisbane*

Don Dixon, of Port Willunga in SA, had similar problems with the print-head.

Obviously there is a major problem here. I strongly recommend any user that has experienced genuine problems to write to Commodore in Lane Cove, Sydney demanding a solution to the problem.

If you have had similar bad experiences with the MCS 810/820 then let me know of the details. The MCS models were reasonably big sellers so I'll bet that there are more stories of problems. I'll keep you up to date with future developments.

In fairness I should say that I have been the owner of two MCS printers and had only minimal complaints about them.

I should also point out that the MCS 810/820s need special care because they are thermal. If you print too many pages in one session the head is likely to overheat, though there is supposed to be an in-built 'feature' that let the user know when there was a problem such as this. You must also be careful of the type of paper used in it. Rough paper is likely to wear out the printhead faster. Still, this is no excuse for some of the problems outlined above. Let's see what Commodore are prepared to do about this problem.

Tips and Tricks

Space doesn't permit a great deal in this section this month, so just a few quickies.

- Continuing with the theme of the MCS810/820, it has been pointed out to me that not all users realise that thermal fax paper will work with their printer. Many people find fax paper better because it's often cheaper and comes in a roll. I normally use 100 sheet packets of A4 thermal paper which cost around \$13 dollars. I find it's slightly better quality than fax paper.

- The C64 mightn't have an elegant 'print@' feature, but you can still control cursor positioning. Just use POKE 211,X : PRINT : POKE 214,Y where X and Y are your coordinates.

- Hopefully I'll have space for more tips and tricks next month. Remember that I'm always on the lookout for tips, tricks, questions and suggestions.

Drop me a line care of: ACAR, PO Box 288, Gladesville 2111. □

Phil Campbell's Entertainment

Screen shots from Pactronics

From this month, you'll notice a great new look in the ACAR Entertainment pages. If all goes well, we will be running screen shots grabbed from most of our latest games with the fabulous Pactronics Action Replay II cartridge. While some Amiga graphics modes can't be grabbed effectively, with most the results are great.

As well as grabbing screen graphics, the cartridge lets you freeze games, examine memory for cheat codes and even modify programs for infinite lives. Handy gadget! For more information about the Action Replay cartridge phone Pactronics on 02 748 4700.

"Gods" from Mindscape UK

This divinely titled new

arcade-strategy game is already getting rave reviews in the UK press. Watch out for it from our local Mindscapers some time this month - and you'll see a review in ACAR soon too!

Sim-City scenarios

Dataflow have just released two new scenario disks for *Sim-City* fans. You'll need a copy of *Sim-City* and at least 1 meg of RAM to run *Ancient Cities* or *Future Cities* - you'll be able to build your own towns in Ancient Asia, Medieval England and the Wild West with *Ancient Cities*, also Future Europe, Future USA and even a Moon Colony with the *Future Cities* disk. For more information phone Dataflow on 02 331 6153.

Hints disk

Don't forget you can order an Amiga disk contain-

ing text files of all our hints and tips from the last two years. It's packed with good ideas, but you'll need a standard Amiga wordprocessor to read them. To get your copy, send a blank disk, stamped, self addressed envelope and a cheque for \$5.00 (payable to Phil Campbell) to: Phil Campbell, PO Box 23, Maclean NSW 2463.

Hill Street Blues available at last

Good news for fans of TV's Hill Street Blues. A game based on the series is now available from Pactronics. Featuring a great intro sequence, with scenes digitised from the show, *Hill Street Blues* looks like a very promising game.

AMOS club hits 1200 members

The AMOS club is a

great way to get into the art of AMOS programming. If you've got AMOS and you'd like to join the club make sure you send your registration form - you'll find it in the AMOS box. If you've lost your form, ring Neil Miller at Pactronics on 02 748 4700. When you join, you'll have access to a huge library of AMOS public domain programs, music and graphics - as well as plenty of advice, and a handy monthly newsletter.

Lemmings running hot

Mindscape report that *Lemmings* is now the most popular computer game in the world! While they may be exaggerating a little, the game is racking up phenomenal sales, and it's incredibly popular. With good reason too! If you haven't ordered your free demo disk from Mindscape, do it now! See the coupon on the back of March's ACAR.

MINDSCAPE COMPETITION

S
W
I
V

This month's competition features SWIV - a cryptic acronym for *SilkWorm IV*. The game is the follow up to *SilkWorm*, still remembered as the best Amiga shoot-'em-up ever. We're giving away five copies of the game shared between Amiga and C-64 entries. (Yep -this time C-64 gamers are in luck! There's a SWIV for you too.)

What do you have to do? It's easy. Simply make all the words you can from the letters SILKWORMIV. Each letter can only be used once. Put your entry in an envelope addressed to:

**Phil Campbell, SILKWORM Comp,
PO Box 23 Maclean NSW 2463**

Write your total on the back of the envelope, and post it before June 3rd. That's all there is to it!

Entertainment Letters

To get your views in print, write to: **Phil Campbell, PO Box 23 Maclean NSW 2463**, or fax 066 452060. Remember, that's the address for gaming letters only - anything else goes to the other end of the mag!

Terry's Adventure and Tassie woes

Dear Phil, Would anyone out there in Amiga land have a cheat for Terry's Big Adventure?

Also, is there any way that competition deadline dates could be longer as I would have loved to have entered February's competition, but the deadline was the end of February and we didn't get the magazine down here in Tassie till March 1st, so how could I enter? This happens quite regularly in Tassie, every so often I want to enter your competitions but we have either missed the deadline or only have 3 or 4 days to do the competition and get the letter posted, and that just isn't enough time! So please be kind and take pity on us Tassies who don't want to miss out - see what you can do for us!

Christine Jones
Penguin Tasmania

Ed: Sorry Chris! We've been in a bit of a mess with our competition deadlines lately, magazines have been late because of the Amiga Annual, but we're doing our best to be fair to all our

readers. Generally, we'll try to allow at least three weeks after the release date of each issue - though we need to close in time for the winners to be notified in the following month's edition. We'll keep you posted on replies for TERRY'S BIG ADVENTURE.

Boulderdashing on the C-64

Dear Phil, My friends and I are newcomers to the C-64 and ACAR, and as there is not a lot on the C-64 we have read ACAR well. We are hooked on the game Boulderdash - our collection is "Series Games 1-4" and we have been able to work out the caves after lots of trial and error, except for cave N-zigzag on series 1. Any assistance would be appreciated. We have tried many ways, and time - or the fireflies - always seems to beat us. We are able to let out 2-3 butterflies and turn them to diamonds, but time runs out.

Robyn Whiteman
23 Goddard Cres
Quakers Hill NSW 2763

Ed: If you can help Robyn out of her tight spot, write to her direct, or drop us a line here at ACAR. There must be plenty of top Boulderdashers out there!

Pirates ahoy!

Dear Phil, I'm writing about your attitude to pirates. When you say things like "Ooh! Look at that naughty pirate," they don't stop - they just laugh. You'll never stop school kids handing disks to each other

- but why can't they do something about the big people such as Australian Crackers United?

Maverick,
Croydon Park, NSW

Ed: Boy, no wonder you didn't put your real name on your letter. I don't say "Ooh, look at the naughty pirate!" I say things more like "Ooh, look at the way Cinemaware has just gone broke. Who will be next?" In other words, my main concern as we watch more and more software companies going down the gurgler, is how are we going to support them to the point where they can actually survive in the business? 'Cause if they can't, then there won't be any software left to swap in the playground!

Excellent mag

Dear Phil, This issue, March 1991, which I got just today is my second and I'm already impressed! I like the way your magazine is set out to cover all people's tastes. Well done on an excellent magazine.

I've enclosed a solution to Mark Peterson's problem with Rick Dangerous - but I've got a problem with the very next screen. I can leap onto the first ledge but when I try to leap to the second ledge the missile (or spear) always gets me. Please help - I've tried

everything!

Reading David Bank's letter and the editor's reply about an Amiga disk with Amiga tips and hints, how about one for the C64 (I am a C128 owner, there has to be more than one!) for around \$5.00? If you can do it for the Amiga surely you can do it for the C64!

Adam Wade
Ridleyton SA

PS. Could you please print this letter. I've written letters to other mags like Zzap, C+VG, CU, but with no success. I'd really appreciate it if you did print this letter.

Ed: Let's start at the end and work back. We printed your letter. Congratulations!

Now, a quick reminder to all our readers that you can get a disk full of ACAR hints and tips by sending a blank Amiga disk and stamped, self addressed envelope with a cheque for \$5.00 to the address above.

C-64 users aren't so lucky - all our text files are in Amiga format, and converting to C-64 disks would be time consuming. There would have to be a BIG demand to make it worth the trouble. If you're interested, let us know so we can gauge the demand.

Thanks for your RICK solution. Hope someone does the same for you so you can get through your own sticky problem.

Mindscape "Ultimate Ride" Competition Winners

Congratulations to these winners in the Mindscape Ultimate Ride Word Competition.

- First prize goes to: **Peter Tate** of Goonellabah NSW, with his huge tally of 1046 words. Well done!
- Second Prize goes to **Taffy Jones** of Padbury WA, with 860 words.
- Third to **Ron Kelly** of Kerang Vic, with 767.
- Fourth to Mr M.N. Guan of Mt Pritchard NSW with 747.
- Fifth to **G. Cook** of Wulguru, Qld with 728.

You'll all receive a copy of Mindscape's top class ULTIMATE RIDE for your trouble. And what of Chris Wootton, who usually storms home in our word competitions? A mere 347 words. What went wrong Chris?

ENTERTAINMENT & TIPS

AMIGA

Send your Amiga hints and tips to Phil Campbell, PO Box 23 Maclean NSW 2463, or fax them on 066 452060.

Xenon 2

Mark Porta, of North Balwyn (Vic) has completed *Xenon 2*, with a high score of 1,107,280 - which means he's very well qualified to offer a bit of advice. Here it is ...

1. If you have autofire, turn it on. In shop 1, don't sell your rear shot. To kill the fish, hit it in the eye.

2. In shop 2, sell the rear shot, buy the double shot and side shot. To kill the Crayfish, go up the side and get the back eyes first. Now go to the next side, and then the front.

3. Don't sell anything in shop 3 - buy a small life. To kill the spider, go up the back and wait for it to move, then fire at the fangs.

4. In shop 4, sell the side shot and buy the laser. Don't stay in the corner when you're attacking the crab.

5. Don't sell anything in shop 5 - buy a life. Stay in one spot as you attack the snake.

6. In shop 6, sell the rear shot and buy the side shot. Attack the dragon from the back.

7. In shop 7, sell the dome and buy the side shot. When attacking the face, first get the eyes - watch out, because they've got lasers.

8. Don't sell anything in shop 8 - buy homing mis-

siles. Hit the gold square to kill the tank.

9. Don't sell or buy anything in shop 9 - go back and kill everything else before you attack the giant space ship.

Thanks for the top class tips, Mark! Hints like this are better than cheats, because the game will still be a challenge - if any other readers have mastered a game, how about sending in a similar "guided tour."

Rick Dangerous

Adam Johnston of Coal Point NSW sends this solution to Mark Peterson's problem with *Rick Dangerous*.

Mark wrote in the March issue saying "I can't get past the Egyptian level where you have to shoot the rock to make the stone fall down for you to climb on and get down to the next section where the spears come out of the wall. I've tried everything possible!" Not quite everything, but Adam agrees it's a tough problem.

"This is the most frustrating point in the game," says Adam, "and I discovered the solution more by luck than by skill." So here's what you do:

"You should have five men when you reach this point as you'll probably lose two or three until you perfect the timing.

"Once you have shot the wall and crawled down onto the ledge, drop down onto the next ledge and immediately duck the spear. Crawl to the right to the edge of the ledge until you're hanging on by your toe nails! That's the easy bit!

"The next bit is where the timing gets critical. Wait until a spear is coming towards you, then stand up and jump over the spear at the last second, landing on the first platform. While the second spear is overhead, run forward. As soon as it has passed, jump again onto the second platform. You should just miss the

third spear. If you don't, try experimenting on the second jump. It's easier if you jump diagonally upwards and then drop vertically downwards. Once on the second platform, shoot the wall to remove the spikes, and you're then almost halfway through level 2."

Thanks for the advice, Adam - just more proof that this is the computer mag with the best quality readers!

Ports of Call

"I'd like to shed some light on Steven McKinlay's problem with *Ports Of Call* described in March ACAR," says the mysteriously named Maverick, of Croydon Park NSW. "It actually isn't compulsory to rescue the life rafts - all Steven has to do is to turn away so he doesn't hit them, and go full steam ahead!" Thanks for the tip, Maverick - but I'll bet there are a lot of little computer guys floating around who wish you hadn't passed on such a mean idea!

More on Rick Dangerous

Adam Wade, of Ridley-

ton SA, also offered to shed some light on the Rick Dangerous dilemma.

"Walk onto the stone that falls down, shoot the left wall (the one where the spikes come out if you walk over to it), squat down a couple of times then wait until it falls. Crawl out before it goes back up and you've done it," says Adam.

Over the Net

"I've got a tip on the game *Over The Net*," says Peter Lawrie, of Cleve, SA. "First, choose a one set game, play the sea-cup and enter one team or two human players. When it's your turn to serve, move the non-serving player up to the top of the court close to the net. This will force one of the computer players to follow him. Now do a jump serve (push up and fire), then hit the ball to the other computer player by pushing right then down. The ball should drop between him and the net and he should miss the ball.

"Hopefully this plan should work. I don't know if it works with the other teams like Coco, Freaks etc but it works with the Rollers and the Golden Boys."

IMMORTALITY or how to live forever in games!

C64

Battle Valley

Surprisingly enough, some magazines didn't like this wonderful game, but I think it's still good even though it's old...Here's a bunch of tips I threw together a while ago, but never did anything with:

- POKE 16371,0 - Disable time
- POKE 26087, (0-15) - Change title colours
- POKE 11612, (0-15)
- POKE 11617, (0-15) - These two change the foreground colour

- POKE 11341, (0-15)
- POKE 11346, (0-15)
- POKE 11351, (0-15) - These three change mid-ground colours.
- POKE 11130, (0-15)
- POKE 11135, (0-15)
- POKE 11140, (0-15) - These three change background colours.

And after you've finished with that lot, type "SYS 25952" to see your technicolour masterpiece!

Ghouls 'n' Ghosts

Personally I don't think this conversion is as good

as its prequel, Ghosts 'n' Goblins, but it's all a matter of opinion.

Here are some tips I whipped up for this game that will help you get to the later stages (which are a bit better). These pokes are for cartridge owners only:

•POKE 11615, X : Where X is the number of lives you want

•POKE 13857, Y : Where Y is the clock speed (1-fastest, 255-slowest)

•POKE 13860,165 : Stops the clock

•POKE 18813,208 : Prevents meanies from hurting you, but still lets you bash the pixels out of 'em!

Ghost 'n' Goblins

Here are some pokes for the classic game itself. Undoubtedly Chris Butler's most triumphant programming effort:

•POKE 2175, X : Where X is the number of lives

•POKE 2198, C : Where C is the colour of the sprites

•POKE 2203, Y : Where Y is the level you wish to start on

•POKE 2214, W : Where W is any of the five weapons (1-5)

•POKE 2240, 9 : Gives you nine minutes to complete a level

•POKE 3901, 0 : Gives you unlimited time

•POKE 4170, 10: Stops sprite collision

•POKE 4242, 42: For smart bomb

•POKE 7086, 10: To make the zombies jump around on Level 1

•POKE 7086, 0 : To allow you to walk through zombies

•POKE 7086, 15: To make the zombies turn into bags when they appear

•POKE 7086, 12: To make the zombies carry you around

•POKE 7086, 13: To make the zombies fool gravity!

•POKE 7086, 1 : To make the zombies turn into spitting plants

•POKE 7488, 56: To make

the plants spit in the opposite direction

•POKE 7777, 0 : Freezes ALL monsters

•POKE 12707, 255 : Speeds up the game by 10!

•POKE 34042, 255 : To make the zombies bring up more pots.

Hmmm, now for a bit about the program that I wrote for this page! This lit-

tle routine allows the user to play the music from just about any game on the market today!

And it explained how to find music in games ... Unfortunately it could not be printed due to space. So if you want to get your hands on this bit of coding, send me a \$5 postal order (made out to Damian Caynes) and

your address, and the disk will be winging its way to you in a few days! The disk also contains demos and a text writer written.

Send any hints and tips, letters, to:

Feel like a little horror? You'll need all the intestinal fortitude you can muster up as PHIL CAMPBELL takes on the latest release from Millenium...

Horror Zombies

FROM
THE

CRYPT!

The wind whips the trees into a frenzy as a jagged fork of lightning crackles through the sky. Count Valdemar turns up his collar against the wind and the rain as he struggles to turn the rusted key in the huge iron gates. The hinges groan as they turn for the first time in decades. In moments, Valdemar is standing at the door of the foreboding stone mansion - his family's ancestral home.

Valdemar had been curious when the Real Estate Agent refused to show him around - but now the hairs prickling on the back of his neck gave him the inkling of an answer. There is something decidedly spooky about the place. A sense of lurking evil.

He's absolutely right - beyond the heavy oak door there's an incredible array of ghouls, spectres, vampires and zombies wandering through the corridors of a house full of false walls, hidden doors and rotating fireplaces. Spooky stuff, but exactly what you would expect from a game called *Horror Zombies from the Crypt*.

Horror Zombies is based squarely

on the B-grade horror movie genre popularised in the 1950s. It's a spooky action adventure spanning six levels, with nearly one hundred action screens on each level - but that's only part of the story. The thing that makes

fireplace. This takes me safely out of harm's way, and lets me grab the dagger hanging on the wall above.

Obstacle number one safely negotiated - now for a real challenge. The scuttling rats in the next room are deadly - one touch from them, and it's back to the title screen. With practice, I finally manage to avoid them and reach the doorway at the far end of the screen, gaining a pair of "tippie-toe shoes" in the process. These are handy - activate them and you can sneak past the meanest spook undetected.

I arrive in the next room feeling a little over-confident. My passage is blocked by a huge, green gargoyle perched just beyond the door.

Horror Zombies so infuriatingly good is the puzzles - almost every screen has a built in brain teaser that will torment you to the point of desperation.

Horror Zombies from the Crypt opens in the cinema. The lights dim, the velvet curtains sweep open across the screen, and the Amiga soundtrack perfectly captures the atmosphere of the era. I roll a few jaffas down the aisle, then reach for my joystick. The action begins.

I am Count Frederick Valdemar, handsome, fearless, and supremely foolhardy. The on-screen Valdemar is well animated - when I say "jump", he jumps, responding instantly to my joystick.

Valdemar is in an ornate drawing room - surprisingly well kept for a house inhabited by spooks. Maybe they're house-proud. To the left stands an uninhabited suit of armour. Let's make that "presumably uninhabited." Suddenly, an eerie green zombie lurches onto the screen. As I soon discover, one touch from this guy leads to a gruesome death. But how do I avoid him? It takes me some time to realise I should follow him for three paces, then leap for the mantel above the

He's deadly - as usual, one touch, and it's back to the start. Next time I know better, and use the special shoes.

There's an identical gargoyle at the other end of the room, so naturally, I do the same. No-one can accuse me of being a slow learner. A frustrating hour later, I realise that Gargoyle number two is actually quite harmless. In fact, you need to push him aside to gain access to the next level.

In spite of many nasty twists like that - or maybe because of them - *Horror Zombies from the Crypt* is a lot of fun. Graphics are detailed, animation is good, and the sound-track will keep you on the edge of your seat. □

Fresh from his encounter with a high tech MiG-29, flying ace PHIL CAMPBELL decides to try something at the other end of the scale - a Sopwith Camel...

Blue Max

The wind rushes through my hair as my Sopwith Camel cruises through the peaceful blue skies over France. Taking its name from the pronounced hump over the bulky engine cowling, the Camel is a real beast to fly - stub-

with the enemy - and the force of gravity. So far, gravity is winning every time.

There are various play modes, from dog-fights against a single enemy plane to fully fledged missions.

There's also a "strategy" mode, a unique feature for a flight-sim. Here you pit your wits against an enemy pilot using a combination of a traditional war-gaming "hex-map" and a small panel showing the animated "real-time" view from your plane.

Next time I did better, and managed to claim one victim before I smashed terminally into the turf.

Blue Max will naturally be compared with *Wings*, a similar game released by the now sadly defunct Cinemaware Corporation. *Wings* features an almost identical World War I scenario, and a similar "seat of the pants" approach to the art of piloting. But there are differences. *Blue Max* leans much more heavily towards strategy. And *Blue Max* is more technical, offering a range of accurately modelled World War I planes to fly - planes which are much harder to keep in the air. *Wings*, on the other hand, has the edge when it comes to atmosphere. Graphics are more detailed, and the sound track is more evocative of the era.

by airframe, front-heavy, with a tendency to nose-dive given the slightest opportunity. We're playing *Blue Max*, an accurate simulation of aerial combat as it used to be.

As a simulator, *Blue Max* is realistic - it offers few modern frills, and forces you to fly by the seat of your pants. Strictly low-tech, but the excitement is undeniable, with man and machine pitted in a deadly struggle

It's complex, but it should be rewarding in the end.

Missions start in the air - there's no take off sequence to worry about, though you will need to open the throttle a little before you try any fancy manoeuvres. Controls

are simple and direct - the plane climbs when you pull back on the joystick, dives when you push forward, and banks when you push left or right. Climb too steeply and the engine will sputter and die - more than likely, you will too.

My first dog-fight was a messy affair that lasted all of 30 seconds. I was blown out of the sky before I even saw the enemy Fokker Triplane.

In other words, it's a case of horses for courses. If you're looking for a tough game with lots of strategic challenge, try *Blue Max*. If it's softer entertainment you're after, *Wings* has a definite advantage. □

Quick Shots

A quick look at what's new in the world of games

Ilyad is a classic shoot-em-up with real style. And tough! Boy, I can't even make it through the first level - but I intend to keep trying.

Right from the beautifully animated space voyager intro, the game has got real class. Graphics sparkle, enemy ships are fast and smooth, and razor sharp reflexes are the order of the day.

The story, if you're interested, is as follows: Baron Arkhon, a sinister tyrant, has imposed his law over the entire world, thanks to a time machine that lets him send his armies to conquer different eras through history. Your mission is to track down his forces and stop them - to do it, you'll fly horizontally scrolling missions

through the eras of creation, prehistory, antiquity and the middle ages.

Well, okay, I know you didn't need to know any of that. The bottom line is *Ilyad* is a very playable space blaster with classy graphics and a not-too-boring sound track. Highly recommended.

'NAM

Vietnam. The longest and most controversial conflict in US history. The war that damaged the psyche of a nation so profoundly that only another war could repair it. A political minefield - especially for anyone foolish enough to take on the job of President of the United States of America. That's YOUR job, if you're playing 'NAM. As invading Viet Cong guerrillas fight to topple the South Vietnamese government, it's up to you to mobilise air units, set ambushes, protect Saigon - and stay in power at the White House.

'NAM is a strategy game, pure and simple - but a reasonably well decorated one. At the political level, actions are initiated from a main menu - troop commitments, air support and other "budgetary" actions are set in motion by filling in appropriate numbers on the screen. Once approved by the Senate, your decisions are activated at the start of the next calendar year. Game time ticks over at any of three pre-set speeds - and it's essential that you've laid your plans before December rolls around.

Military operations are carried out on a map display - units are displayed as boxes, which can be equipped with helicopters (if you've provided them as

president) and moved around the map. As you collide with enemy forces, the size of your box will diminish as you suffer casualties - the idea, of course, is to obliterate the enemy boxes before they do the same to you.

There are a number of pre-set scenarios, which avoid the political side of the game - take control of forces at Khe Sanh, or in the famous Tet Offensive.

This is a complex game, and you'll need to read the manual before you play. Military strategists will love it - others should approach with caution. Graphics are a direct port from the Mac version, and while they're obviously fine on the higher Mac screen they lose a lot in the translation. Richard Nixon's ugly mug is almost unrecognisable. Maps and other screens are much better, and overall the game presentation rates an okay.

PRO TENNIS TOUR 2

Pro Tennis Tour was one of my all time favourite sport sims. The controls were fast and natural - so much so that you could almost imagine yourself running round the court. Now there's a sequel. *Pro Tennis Tour II* has a number of new features - for a start, you can create and save your own player. You can play almost any stroke, with increased options like lobs and smashes, and players can now move around the full area of the court.

The default game is a women's singles match, and the ladies certainly move round the screen with ease and grace. As soon as you pick up the joystick, you feel you can play - it's even more user friendly than *Pro Tennis I*.

Creating your very own

Boris McEnroe is easy. A menu screen lets you set skill values for eight specific strokes - you start with 80 skill points to share around the strokes, and can only build up your characteristics by practising and playing matches.

Pro Tennis Tour II is hard disk installable - and it's already earned itself a permanent place on my dh!

FISTS OF FURY

It may be nothing new but what a great little package - a veritable box full of action. What I am talking about is *Fists of Fury* - Edition 2.

Fists of Fury has a decidedly oriental flavour and just a touch of the light-hearted. All in all there are four games in this package, *Shinobi*, *Ninja Warriors*, *Double Dragon II* and *Dynamite Dux*. All those names should be familiar to lovers of action / violence / beat-the - life - out - of - the - other - guy games.

If you're one of the few who are not familiar with these games, here's a brief rundown.

Shinobi - A group of children have been kidnapped and your mission (should you decide to accept it) is to rescue them - the use of excessive violence is encouraged.

Ninja Warriors - I'm not sure if there is a point to this game. It seems that you just have to be as violent as possible and your score goes up.

Double Dragon II - Marian has been killed and Billy and Jimmy have not taken

her death very well at all - in fact they are out for revenge. There is even a chance that if they are successful then they will be able to bring her back to life. Again violence is the order of the day.

Dynamite Dux - this is the kind of game you would be happy for your younger brother or perhaps even your parents to play. Lucy has been kidnapped and your job is to get her back (sound familiar?) The really cute part about this one is the way these guys punch. They make Mike Tyson look like he isn't really trying.

"An absorbing diversion for players with an eye for detail." Thus spake DAVID GLOVER as he assessed this new Amiga game...

ZARATHRUSTA

Alright Space Cadets, here's the scenario: The Resistance (that's us) is about to launch a major offensive against the Empire (that's them). In preparation for this, the Resistance have captured several star ships, but are lacking the essential power sources for these formidable craft, Klystron Pods.

Your mission is a simple one (in theory). Working for the Resistance, you are required to steal the pods from the Empire's storage planets. You must find the pod, hover just above it, activate your ship's tractor beam until the pod hooks on and

then thrust away skyward to the good ol' Mother Ship. Easy, eh?

There is at least one pod on each planet, either on the actual surface or cunningly tucked away in a cavern. The first trick is to simply find the thing (they look like spheres resting on plinths or monuments) and get a hold of it. Then it's "pedal to the metal" as you blast away to the sanctuary aboard Mother who will take you immediately to yet another planet where you start your search anew.

This has to be one of the most painstaking computer games I've played. You have a full screen in front of you: the programmers (the Whiz Kidz - based in Europe) have thankfully used the PAL format - no missing third of a screen! Your ship appears as a small on-screen sprite floating in the black abyss of space somewhere above the planet.

A dab of thrust here, a tweak of steering there, and you'll be gliding and hovering to your heart's content. But beware, successful flying calls for the coolest and most sensitive

of hands. The controls are very touchy indeed. The slightest mistake or over-correction will see you plummeting to your doom on the planet's surface.

Negotiating the caverns requires absolute surgical precision - it's almost like threading a needle sometimes. The job is not made any easier by the presence of a huge variety of what the manual calls "Obstacles" - 15 different types in all - some passive, some active and some downright 'ornery. The "obstacles" become more prolific and obstructionist as the game progresses over its many, many levels.

A blessed relief is the absence of a time limit, although you have a finite supply of fuel (refill tanks are avail-

ble on the planet) and six space ships (lives) to play with. A small indicator panel at the top of the screen gives you the score and an up-to-date status on your resources.

You and your ship are not entirely defenseless. In your arsenal are Plasma Bolts, your main form of attack, and a Laser Scanning Device (LSD) which scans the cavern walls and destroys all enemies. The LSD is very effective, but also heavy on the fuel bill. Using the LSD with manic glee, I found to my dismay that it bled my tanks dry and I made an "uncontrolled flight into the ground".

Graphics on *Zarathrusta* are adequate, though unspectacular. Sound effects are good and loud, although a little sparse at times. An excellent sound track runs during the title screens only. Control options are either joystick or keyboard, although I found the latter far more effective.

Zarathrusta is for those with patience and perserverance, with a

steady hand and a cool head. It takes co-ordination, anticipation and a keen mind. Trigger-happy space cowboys looking for an *R-Type* or *Xenon II* will be disappointed, since this game is simply not designed for that sort of action.

While *Zarathrusta* will not go down in history as an Amiga games classic, it's an absorbing diversion for players with an eye for detail and sensitive touch on the throttle button. □

HEWSON

Blitzkrieg - Battle at the Ardennes is just one in a series of Wargames being distributed by a new UK publisher called "Storm Computers Ltd" - keep your eye on them. Wargaming and simulations are increasing in popularity and becoming increasingly sophisticated.

Of course, these games aren't for everybody! *Blitzkrieg - Battle at the Ardennes* appeals to those with above average intelligence, razor sharp minds, brute cunning, and an appreciation of good timing and patience. *Blitzkrieg - Battle at the Ardennes* simulates one of the most decisive battles of World War II. On December 16th, 1944, coinciding with several days of bad weather, Hitler ordered directive "Wacht am Rhine." The German plan was to strike weakened Allied lines in Belgium and Luxembourg and to break through and push quickly to the Meuse River to capture Liege and finally the port city of Antwerp. The capture of Antwerp was essential to postpone the invasion of Germany, and give the Fuhrer a chance to honour his promises of secret weapons that would win the war. But the chances of success were remote. The Germans were desperately low on fuel and the Allies had firm control of the air, and strategic superiority in Europe.

One player, as either the German or Allied forces, can battle against the computer, or two players can face each other. There are a number of variables that can be set at the beginning of the scenario - such as the standard of intelligence reports, relative condition of forces and the weather in which the battle will be fought - to eliminate any unreasonable advantages between players or computer, and to provide an infinite range of battle conditions.

The map or battlefield is an area composed of 1700 hexagonal cells (hexes). Each cell is assigned a terrain type of mountain, plain, forest, city or Siegfried line. As the attacker, one moves his units around the map encountering and engaging units of the enemy. The various types of units - infantry, artillery, light and heavy armour - have combat strengths and movement abilities associated with them, which are modified by the terrain.

It is essential that you keep an eye on the terrain and your supply lines as you move about. Whenever a

Bored with board-based war games? Then this is just what you've been waiting for. Join ANDREW BAARTZ as he takes on the allied forces at Ardennes ...

unit is adjacent to an enemy unit it can engage in combat, and a surprise encounter while you are vulnerable is usually disastrous. *Blitzkrieg - Battle at the Ardennes* is simulations of a board game. If you've ever played these type of boards games - you'll find a computer version just heavenly. No more tables to look up. No more fiddly calculations. Truly secret moves! Possible move options highlighted in advance. Realistic use of terrain and intelligence. Warnings over illegal moves. And no disputes! (Because the computer's decision are final). Just the mention of these advantages will bring tears of joy to wargamers' eyes.

I'd never played the particular board game on which *Blitzkrieg* was based, so it took me about an hour to really get into the game and a bit of time browsing through the manual. I am glad I persevered - because soon I was leading the German assault towards Antwerp. The Allied airpower gave me a bit of a hammering, but the overcast days protected me and my forces surged forward. Capturing petrol dumps and cities. Organizing V2 raids. And hoping for more overcast weather. Eventually my troops marched on the objective. The actual fight for Antwerp was long and bloody, but victorious.

Blitzkrieg is a winner. These military games are a sort of "Ultra-Chess." The challenge is irresistible! □

A in One Compilation **THE GAMESMEN** M E G A P A C K

This is a review of a compilation package of software called *Mega Pack* from Sydney company "The Gamesmen." *Mega Pack* combines two car racing games, an arcade movie spin-off and a golf simulation.

•Number 1 - *Jack Nicklaus' Greatest 18 holes of Major Championship Golf*. Like the car games, this golf

THE DUEL

simulation comes from Accolade. It's a couple of years old now, and not quite as polished and detailed as *Greg Norman's Ultimate Golf*, but still an excellent simulation that's fun to play. There is enough variety in the game to keep you interested for many long hours.

You choose whether you are male or female, beginner or expert. There are Pro, Mens, and Womens tees on each hole. For beginners the computer automatically selects a club for

you, though you may change it if desired. Pros must always make their own choice.

You can play alone, or with a combination of several human and/or computer players. You have a choice of two real golf courses and an imaginary course made up of Jack's favourite holes. Games can be saved and resumed later.

Jack Nicklaus' Golf is great fun to play, especially with a friend (or friends).

• Number 2 - Now for my least favourite, *Ghostbusters II*. Perhaps it's because I didn't see the second movie, but I don't seem to be able to get the hang of this one. And I mean hang. That's where you start. You're on a rope, about to be winched through a man-hole into the spooky depths below the streets of Manhattan. Your object is to make it through all the ghosties to the bottom of the hole and collect a sample of slime. I get to the bottom all right - at terminal velocity!

If you get through this section, there are two others, which no doubt make sense to you *Ghostbusters II* fans, but it's all Macedonian to me.

Now the car games. First is *Test Drive II: The Duel*. It's almost identical to *Test Drive I*, except you can choose to "Duel" with another car. You get a view of your instrument panel and the road ahead through the windscreen. You can also see the road behind in your rear mirrors. The steering wheel turns in the appropriate direction as you move the joystick.

There are some nice opening graphics and SFX. You get a choice of cars, including the

Porsche 959 and Ferrari F40. There are 12 skill levels, from beginner to expert. You can buy disks with extra scenery and cars.

The other racing game is *Grand Prix Circuit*. It operates exactly like *Test Drive*, except you pilot a formula one racing car around a Grand Prix circuit. The lower of the 12 levels have automatic gear changing. At expert levels it is possible to blow up

GHOSTBUSTERS

your engine, spin out, or do other damage due to bad driving.

You can decide how many laps in each race, and what type of car you drive, plus choose to drive in individual races, or the whole Grand Prix Circuit.

GOLF

With budget packs like this, you can't expect the year's latest releases. But what you do get is last year's great games, or this year's ordinary ones. With that in mind, The Gamesmen *Megapack* is good value. Both *Test Drive II* and *Grand Prix Circuit* are excellent games with a lot of attention to detail. The golf game with the long name is also a lot of fun. *Ghostbusters II* isn't great, but it's playable. So if you can only afford one game, why not buy four instead?

ACCOLADE

ACTIVISION

GRAND PRIX

PHIL CAMPBELL takes control of the latest in Soviet military hardware as he checks out the flight-sim we've all been waiting for...

Even though Soviet military hardware copped a fair hiding in the Middle East, there's still a lot of interest in the *MiG-29 Fulcrum*, a nimble jet fighter producing speeds of Mach 2.2 at an operational ceiling of 16,800 metres. There's been an equal amount of interest in *MiG-29 FULCRUM*, the latest flight simulator from Domark software. My mate Ken Simpson is literally begging for the chance to try it out - and he will, just as soon as I've got it licked.

slide manoeuvre described in the manual. As usual, I had trouble even getting off the ground - so the fancy stuff can wait.

Cockpit instrumentation is completely authentic, and quite different in concept to the Western equivalent. The "Artificial Horizon and Turn" display, for example, shows your pitch and roll on the same dial, while the attitude meter features a moving plane silhouette on a fixed background - the western version features

fortunate "accident." Apology accepted, but it's up to me to arrange a few accidents in return. Next time they fly over the border, I'll be ready.

Taking off is easy - once you know how. Simply open the throttle, release the wheel brakes and you're trundling down the runway at an alarming speed. Pull back on the joystick and your nose rises gracefully into the air.

The manual strongly recommends controlling your MiG with a mouse - simply pretend it's the top of a control stick, and move it accordingly. "A switched joystick," says the manual, "provides a crude but intuitive way of controlling the plane." Suits me fine - I'll trade crude for intuitive any day. If you're flying the IBM version, you'll be using a standard analogue joystick - probably the best option of all.

Moments after take-off from Tbliski, I'm flying high above the famous Great Wall. From this height it's more like a great line - just a black trace against the green of the earth. Suddenly, two Chinese planes appear - yellow blips on the dark face of my radar screen. Selecting my AA-8

The trouble is, *MiG-29* has a host of features, and a learning curve almost as steep as the 80 degree tail-

slide manoeuvre described in the manual. As usual, I had trouble even getting off the ground - so the fancy stuff can wait.

After a quick stint in the training academy, I was keen to try a full scale mission. Never mind the fact that I failed the training session - real pilots might train for a full year, but they only have one life to play with. I can afford to be cocky. There are five missions to choose from, each with an authentic Soviet feel. I chose assignment "Yellow Dragon," a sortie in the skies above the Great Wall of China.

Chinese Shenyang fighters have been illegally intruding on Soviet airspace towards Tbliski aerodrome. When an aging Soviet Su-21 fighter challenged them yesterday it was shot down. The Chinese ambassador sent his deepest regrets for this un-

fortunate "accident." Apology accepted, but it's up to me to arrange a few accidents in return. Moments later, there is a puff of smoke on the horizon. Moments later again, I plough nose first into the ground.

Rule Number One. Don't watch puffs of smoke on the horizon. Watch your altimeter.

MiG-29 Fulcrum is a solidly built flight-sim, with plenty of features to play with - including "missile-eye views" of the action, just like the "slam-cam" coverage of the Iraqi decimation. On the Amiga version, graphics and sound effects set no new standards - adequate, but not brilliant. Even so, they don't spoil the flavour of the game.

Versions of *MiG-29* are available for the Amiga and suitably souped-up IBM compatibles. □

Adventurers Realm

by Michael Spiteri

Welcome once again to the dark caverns of *The Realm* - the place where adventurers all over Australia turn for help in their quests. If you are stuck in any adventure games, send your problems to the following address:

**Adventurers Realm, 12 Bridle Place,
Pakenham, Vic 3810**

If role-playing-games (RPG's) are your kettle-of-fish then give Kamikaze Andy (alias Andrew Phang) a bell at:

**The Dungeon P.O.Box 315,
Maddington, WA 6109**

Always enclose a stamped addressed envelope when writing to the Realm.

**Realm Chit
Chat**

Firstly a very big thank you to:

- Stuart George (Springvale, VIC)
- Michael Bathols (Narrogin, W.A.)
- Michael Walsh (Horsham, Vic)
- Kathy Kupresak (Bonython, ACT)

for the enormous amount of hints sheets, solutions and tips kindly donated to the Realm. I am sure they will get many adventurers out of a sticky spot.

David Upton suggests that adventurers should exchange with each other completed adventure games. Sounds like a good idea, but I'm not sure it will do the deteriorating Aussie software market any good. I can't see any problems if the games are no longer available, though. What do other Realmlers think?

\$1000 is what you can win by solving the C64/128 graphic adventure game - *Space Explorer*. The challenge has been set by Gary McCleary Software. Watch for the advert.

Also, there are continuing pleas for *The Official Adventurers Realm Hint Book*. It is out soon for only \$9.00 at most newsagents and computer dealers. If you cannot to seem to find it, ring (02) 398 5111.

Adam Read of Morphette Vale is shifting to England, and wanted to know if the magazine is available there. I don't think we have reached that far overseas....yet, however if you ring up Darrien Perry (thats a girl) on 02 398 5111 before you leave, I am sure a subscription could be organised.

Free Hint Sheets

As promised, hint sheets for *Castle of Terror* and *ZZZZZZ* have been dropped from the list of free hint sheets. There are still a couple left over if you desperately need them.

With two hint sheets out of the door, we now have room for even more new hint sheets:

Zak McKracken and *Indy (Jones)*.

Yes folks, the Lucasfilm games have been puzzling adventurers from all over Australia, so it seems fitting that these hint sheets are made available. You can thank Kamikaze Andy for the *Indy* hint sheets, and many many adventurers for the *Zak* hint sheet.

Readers of the Realm are entitled to up to four different hint sheets, as long as a stamped addresses envelope is enclosed. The only address to write to for hint sheets is:

Free Hint Sheets, 12 Bridle Place, Pakenham, Vic 3810

Guild of Thieves, Jinxter, Pawn, Zork I,II,III, Maniac Mansion, Bard Tale I,II,III, Hitchhikers Guide, Faery Tale, Hobbit, Never Ending Story, Fish, Deja Vu, Uninvited, Dracula, Borrowed Time.

CLEVER CONTACTS

More brainy adventurers to add to the ever-increasing list of adventure clever contacts. Always enclose a stamped addressed envelope when writing to a clever contacts.

Michael Walsh is a temporary contact until he starts uni next year. His address is:

P.O. Box 136, Horsham, Vic 3400. He can help in: Zork 1-3, Stationfall, Planetfall, Starcross, Lurking Horror, ZZZZZ, Rigels Revenge, Bastow Manor, Adventureland, Pirate Adventure, Secret Mission, Pool of Radiance, Azure Bonds, Silver Blades, Hulk, Spiderman, and Dracula.

Bruce Gilbert of 88 Woodward Circle, Marangaroo, W.A. 6064 can offer help in: Larry 1,3, Shadow of Beast 1,2, Dejavu, Maps for Dungeonmaster, It Came from Desert, Ghostbusters II, Operation Stealth, Police Quest II, Heroes Quest, Mean Streets, F19 Stealth Fighter, Immortal, Dragons Lair, KingsQuest 1,3, Space Quest 1,2, Uninvited, Shadowgate, Dreamzone, and Zak McKracken.

Finally, a very big thank you to out clever contacts, the unpaid workers who provide an excellent service to our readers. Good one, guys!

Help, Help & more Help or the Smart Adventurers Dept.

Many thanks to all the contributors to this section of the magazine. If you were stuck a little while back, then instant relief could be below!

Game: Aztec Tomb Adventure
For: Mark Bilney (Feb issue - disguised as Jan issue).
From: Shelley Duval
Help: The rope can be found when you are still at the beginning, in the house. Go ladder, get chest, down, s, n, look bed, go trapdoor, look, get cloak, wear cloak, examine cellar, get key, open chest, get rope, get sword.

Game: Ring of Power
For: Mark Bilney (Feb issue)
From: Shelley Duval
Help: The game only flashes the password on and off just the once, and only if you start the game from scratch. Sometimes it won't show it at all. However, when on the final level you go to the shopkeeper in the far bottom right hand corner, he will reveal the password.

Game: Neuromancer
For: Colin Smith (Feb issue)
From: Alex Stivala and Stuart George
Help: At the start of the game, use the PAX to send a message to Armitage which simply contains your ID number, and he will deposit 10000 credits in your account.

Open an account with the Bank of Zurich (link code Bozobank) then use the Tactical Police database to have Larry Moe arrested, so you can get to the Panther Moderns meeting room and talk to Lupus. Ask him about Gameinschaft, and he will tell you an account number which you can use to transfer money from Bank Gameinschaft to your account (link code Bankgemein).

Register yourself as an employee with Hosaka to pick a week's salary, and by using the cyberspace database you can get 500000 from the Bank of Berne.

Game: Asylum
For: Scott Pitcher (March issue)
From: Alex Stivala
Help: To stop the exterminator from

fogging the pestilence, you must tie him up with the rope. The rope can be found in one of the corridors.

Games: Pro-Pack Adventurer Games
For: Brian Blackwell Jnr (Feb issue)
From: Stuart George
Help: In *Temple Curse*, to cross the pool, just say ROW and a direction.

In *Last Planet*, to look at the drawing try climbing the stalagmite. To get the rope you have to cut it.
In *Island of Spies*, get the parachute, wear parachute, pull lever, pull ripcord, remove parachute, and crawl out.

Problems, Problems & more Problems or the Troubled Adventurers Dept.

The Realm received a handful of problems this month, with games that until recently have been unfamiliar among these pages. If you can help these poor souls out - please do!!

• Tony Pappas of Finley in NSW is stuck in *Strangeloop*. First of all, he would like to know how to get the Robot Manual from the litter Anti-Matter Man without getting killed. Also, what does he have to give the robot that waffles on about putting out brief candles?

• Julie Stearman of Blaxland in NSW wants to know how to deal with the Great Head in the game *Wizard of Oz*. Julie says at this stage of the game the parser becomes hostile.

• Getting out of the house is the problem facing Matt and Luke Walsh of Alphonington in Victoria. The game where this house exists is *The Jetsons*.

• Jim Fang of Brentford Square in Victoria asks if anyone can help get past the Air-Level in the game *Moebius*?

• Lisa Ferraro of Mt Gambier is South Australia is really stuck deep in the *Black Cauldron*. Firstly, what does she do after the Gwydant has taken the cauldron? What does she do at the castle other than freeing the princess and the prisoner? What else does she do with Guigi other than give him cookies? Finally, what is something else she can give the witches besides the sword?

• Axl Batroc is having lots of trouble in *Neuromancer*. Trying to get Comlink V6 is becoming a real headache for Axl. □

The Dungeon by Kamikaze Andy

Well, the long awaited Amiga CDTV is almost upon us, and this month the Dungeon takes a look at the upcoming as well as potential RPGs that will appear on CD-ROM.

From all reports, there are nearly 100 software products for the CDTV within the first three months of its release, half of which are games. It is important to note that because of the unusual input device the CDTV uses (an infra-red remote control just like your VCR or TV controller), there might be some modifications made to the first few games on offer.

Later in the year, Commodore will bring out its mouse and keyboard options for the CDTV (both of which will also use infra-red input technology). This is good news, because most of us know that complex adventures and roleplaying games require mouse and keyboard to operate efficiently.

First wave

Well, what are the first adventures to be released? From Cinemaware come CDTV conversions of *Defender of the Crown* and *It Came From The Desert*. Both will be direct conversions of their Amiga originals, but will feature CD audio, digitized speech instead of text responses, and in the case of the latter game, digitized film footage of real live actors!

According to Cinemaware, this will be the trend for the "First Wave" of CDTV games. They will be direct conversions of established titles, but with added music, complete speech dialogue, and digitized stills. (Ed: Late reports indicate that Cinemaware is now defunct - let's hope these games aren't!)

Second Wave

At this stage, companies are trying to fill in the 500MB of CD space with such enhancements. When the "Second Wave" of games arrives, CDTV owners will get more original products that will make further use of the (hopefully by now released) mouse/keyboard.

Origin will put out a CDTV version of its spectacular space-combat simulator, *Wing Commander*, by the end of the year. *Ultima VII* is due for CDTV sometime next year, as is *Wing Com-*

mander II. Sierra's upcoming releases like *Leisure Suit Larry V* and *Police Quest III* (due at the end of 1991) might be CDTV candidates.

More definite games include ICOM's *Sherlock Holmes: Consulting Detective*, FTL's *Dungeon Master*, Lucasfilm's *Indiana Jones and the Last Crusade* (with film clips of Harrison Ford as *Indiana*!), and the Broderbund *Carmen Sandiego* series.

An original adventure game due out soon is *Detectron*, from *Defender of the Crown* designer - Kellyn Beck. This game is a detective adventure, and like others mentioned above, features digitized footage and lots of digitized speech.

Because *Detectron* was designed with the standard CDTV remote control in mind, the options are a little more limited than in other games. For example, each screen will have three options that you can select via remote control, and only three options. The storyline will develop as you get further into the game (something like a Choose Your Own Adventure system). Beck emphasizes that *Detectron* is an "exploratory" game, giving users the chance to see how the mystery turns out differently with each choice.

Success Factors

The eventual success of the CDTV format will hinge on the speed at which Commodore can produce two things.

The first is greater software support (although many companies have signed up, some giants like Electronic Arts are still wary of CDTV). A strong advertising campaign and, more importantly, consumer support from Commodore itself is vital for healthy CDTV sales.

The other important factor is how fast Commodore can come up with its promised CDTV converter for current Amigas. With over two million Amigas sold, Commodore can make a much better case for more software support if it can show that there are potentially two million CDTV owners out there already with the release of the CDTV adaptor.

Commodore also needs to release the mouse and keyboard options for CDTV very soon, as the remote control input device is very limited. I can hardly imagine how something as complex as *SimEarth* can be comfortably handled with the remote control device.

CDTV is an exciting prospect for all Amiga and computer owners, not only for adventurers. □

Realm Review Social Phobia

For the Commodore 128 and IBM-PC. Available via public domain.

Did you know that really good text adventurers still exist? The public domain libraries are full of them, and if you are looking for a good example of one then get your hands on *Social Phobia*, written by regular Realmer Alex Stivala and his merry crew.

This adventure should please science fiction fans, as it is based around two Mars satellites whose inhabitants are constantly at each others throats. On one side you have the trendy fearful Phobians, and on the other you have the ugly looking Demonic merphs.

The war between the two races does not involve physical weapons, but psychological ones.

Anyhow, it becomes apparent that the Phobians are losing, and they need more brainy beings to help them in the war. In their quest for more brains, you somehow get teleported from your Volkswagen.

So, you think the aim of the game is to help the Phobians succeed in their plight against the merphs and become the greatest hero since Flash Gordon?

If you are looking for a good text adventure then check out *Social Phobia*, written by regular realmer Alex Stivala and his merry crew.

Wrong! You decide to wimp out by not getting involved in this alien mind feud, and work out a way to return home. So begins the game of *Social Phobia*. The game is just pure detailed text with some humour scattered here and there. It features a full sentence parser, and a fairly reasonable vocabulary. There are not too many locations to visit, and the problems vary from straightforward to downright difficult.

My main criticism is that the play does tend to get knocked off fairly easily without much warning.

This game will probably only set you back a few dollars, and will supply you with many hours of fun and frustration. It most certainly gets the Realm's seal of approval! □

Making Music is easy with the **KAWAI FunLAB MUSIC SYSTEM**

INTRODUCING THE
COMPLETE MUSIC
SYSTEM FROM KAWAI

- No technical knowledge of MIDI is required to operate the software.
- No external amplification is needed.
- System operates on Amiga 500, 1000, 2000 and 2500.

THE KAWAI FunLAB MUSIC SYSTEM

HERE'S WHAT YOU GET...

KEYBOARD-

A 61 note keyboard with full size keys (colour colour co-ordinated with the Amiga), built in stereo speakers, 100 different studio sampled instrument sounds, 100 accompanying rhythms, programmable One Finger Ad Lib feature, and lots lots more.

SOFTWARE-

Steinberg FunLAB software is a 5 track sequencer (allowing overdubbing and multitrack recording) with music notation display, song lyric display, jukebox feature, optional 'quantize' or error correct and three demonstration songs.

MIDI INTERFACE-

Compact MIDI interface which fits directly into your Amiga serial port.

MIDI CABLES -

Two MIDI cables for connecting the KAWAI keyboard to the MIDI interface.

Communications UPDATE

by Jonathan Scowen

In this month's column we'll be looking at data compression for file transfers and Telecom's Discovery. Before we kick off, I would like to say a big thanks to all those people who wrote to me or called my BBS with positive comments about this column. The editor has decided to keep it going!

File compaction

Regular modem users are often found compressing and decompressing files. But what is the point of doing this? Well, it saves money and time.

First of all, several files can be sent in one hit by joining them together as one big file. As the files are joined, the compression program packs the information using special algorithms to remove repeated sequences of data and replace them with codes which can be expanded back to the original data later on. The resulting file is much smaller, meaning it will take less time to transfer the file.

Some people refer to this process as archiving. Whilst this is partially correct, the term archiving refers purely to the fact that compacted files are often stored away as an archive of no longer required files. The correct term is compression.

How do we compress files? There

are many programs available which all have different compressing speeds and sizes. A few popular programs are:

DiskMasher	Warp
LhArc	Zip
LhWarp	Zoo
Arc	Pak

Compressing whole disks

This is done in several ways. To archive a disk you need a program that can create the directories when unarchiving. In the beginning *Warp* (.WRP) was used. *Warp* was slowly replaced with *LhWarp* (.LHW). Then people just used *LhArc* (.LZH) which is mainly used for programs (some *LhArc* unarchivers do not create directories, so be careful). The latest utility to handle this job is *DiskMasher* (.DMS).

I used *DiskMasher* and *LhWarp* on the same disk and outputted the file onto a hard drive.

DiskMasher (.DMS) was quite difficult to work out, but was still understandable when you knew how. *DMS* also allows encrypting, meaning that to uncrunch, a password has to be entered. Several compression methods are available (I used the default compression rate). It also allows a text file to be enclosed. While crunching, *DMS* shows you the size uncrunched and the size it is crunching it to. At the end of the crunching session it tells you the size of the output file, number of tracks it compressed, time taken and the rate (ie tracks per minute). *DMS* also took advantage of colours to make it more understandable.

LhWarp usage was more like the usual compressors and made it very clear how to use it and like *DMS* also allowed a text file to be enclosed. *LhWarp* while crunching uses the disk bit map to skip empty parts of the disk. *LhWarp* was VERY slow compared to *DiskMasher* as shown below. At the end of crunching it tells you the input and output sizes.(see table below).

Although *LhWarp* was able to achieve a smaller output size, I think that a different mode of compression on *DMS* could have produced a better result, but taken a bit longer.

Overall, *DMS* was better. *DiskMasher* can be found on the majority of BBS's and if not ask someone on a multiline BBS or ask your SysOp to get it for you by file requests. As a last resort you could even try my BBS or by mail and I will get it to you as soon as possible.

Discovery!

New services are being added all the time to Telecom's Discovery. The available services now include:

AAP News Report
National & International Databases
Online Banking
FlightComm Information
OTC
IntelNet Electronic White and Yellow Pages
Mediatel Electronic Messaging
Aust. Bureau of Statistics
Fax Transmission
Dow Jones News Retrieval Service
Metex Weather reports
Official Airlines Guide
Money Watch
Shopping
Racing news and Betting
Games

How useful are all these wonderful services?

The Electronic White and Yellow pages allows you access to 55 telephone directories and over seven million names. The Online Banking service is available 24 hours a day with the Commonwealth Bank, you can obtain Mastercard / Bankcard / Key-card account information and details of the last 150 transactions can be viewed. Australian Bureau of Statistics offers 148 different topic headings and information 24 hours a day plus other Government databases.

Charges vary from 5 cents per page to 20 cents a minute depending on the time you call, plus a registration fee of \$60.00 (which includes software for IBM's and compatibles) plus an additional \$15.00 monthly

FAX MODEM?

Malcolm Moy of Chittaway Bay NSW wrote in asking: "Is it really true, that it is possible to send and receive faxes with a modem and printer?"

Yes, this is true! There is a fax program for the Amiga floating around on many BBS's. Unfortunately it doesn't include instructions and no one has been able to make it work fully.

You could also try a Fax/Modem such as the 'Maestro 9600 XR Datafax' which is a 1200/2400 modem and a 9600 fax machine in one. It is fully Hayes AT command set compatible and has auto dial, auto answer, auto disconnect. The cost is \$399 which is less than most modems alone - it is available from Direct Access Computer Products (were called Micro-Educational) in Newcastle on 008 025 229. Sounds great, but there's no Amiga software to support the

fax side yet.

However, in the U.S.A. there are several fax modems for the Amiga. When they turn up here we'll let you know.

Call for Sysops

Any SysOps who would like their BBS reviewed - you can contact me at the address below or at my BBS. I would be happy to review your BBS if requested.

What's happening next month?? I will explain those 'AT' commands in more detail (so you actually know what they mean instead of just a list) and much much more. If you have any questions or comments, I can be contacted at:

Jonathan Scowen

PO Box 162

Epping NSW 2121

Call my BBS: ALL AMIGA BBS!
(02)876-8965

Until next month, happy BBSing....
